### Turbo LAN

Turbo LAN is a network traffic shaping technology that lowers lag and helps reduce delays during data transfers or when playing online games. It allows you to set programs or application's network priorities to currently running games or applications.

Turbo LAN features an intuitive user interface and an Advance Mode that tweekers can use to configure hardcore controls or settings.

To launch Turbo LAN, click or tap

Displays the Network Adapter  
information

Click to view the programs  
under these utilities

Using the Advance Mode

The Advance Mode allows you to configure the priorities of your programs or applications or configure your network device.

To go to the Advanced Mode, click or tap

The Advanced Mode contains the following utilities:

- Preferences: Allows you to control the network's traffic to optimize the program's performance, favor ping time, and avoid packet loss.
- Protocols: Allows you to set priority to the network adapter and its protocol to reduce delay during data transfer, and maintain the speed of Internet access.
- Programs: Allows you to set priority to the programs or applications.
- Traffic Shaping: Allows you set the priority to the network adapter and its protocol to reduce delay during data transfer and speeds up the Internet access.
- Adapter Info: Displays the information about the installed network adapter in your system.
- Online Budgets: Allows you to set an online budget time to your network adapters.

Traffic Analysis: Allows you to assign protocols and programs in one set

SABERTOOTH Z170 S

the on the desktop.

Displays the current connection and bandwidth usage status

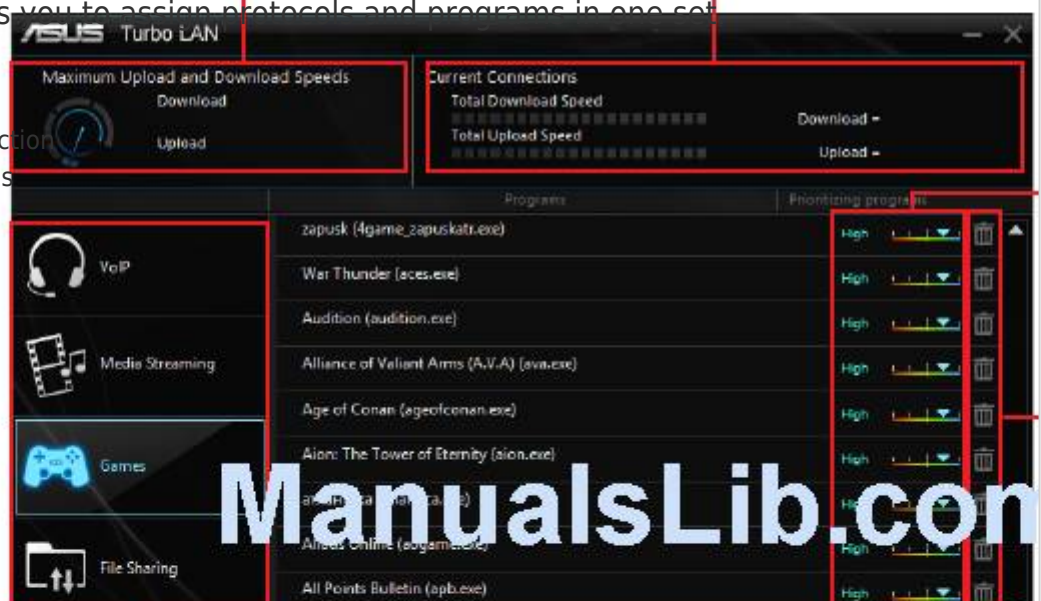

Click to open

Click to open an item

Advanced Mode

- Adjust the slider to set a program or application's priority
- Click to delete an application or program on the list
