Before you clean the air conditioner, be sure to turn off the circuit breaker or main power switch.

### **Cleaning of indoor unit and remote controller**

- Use a dry cloth to wipe the indoor unit and remote controller.
- When the air conditioner is extremely dirty, use a cloth dipped in cold water to wipe the indoor unit.
- Never use a damp cloth on the remote controller.
- Do not use a chemical-based duster for wiping or leave such materials on the unit for extended periods of time. Doing so could damage or cause the surface of the unit to fade.
- Do not use benzine, thinner, polishing powder, or other solvents for cleaning.

These can cause the plastic surface to crack or deform.

**When not using the unit for at least 1 month**

- (1) Perform fan operation for 3 to 4 hours to dry the inside of the unit.
- If a high temperature setting is used with cooling operation, fan operation is performed.
- (2) Stop the air conditioner and turn off the circuit breaker.
- (3) Clean the air filters.
- (4) Remove the batteries from the remote controller.

**Check before operation**

- Check that the air filters are installed.
- Check that the air outlet and inlet of the outdoor unit are not blocked.

**Cleaning the air filter**

Clean the air filters every 2 weeks.  
 The performance of the air conditioner will degrade if the air filters are covered with dust.  
 Clean the air filters as often as possible.

**Preparation:**

1. Turn off the air conditioner using the remote controller.
2. Open the air inlet grille.

**1**

Open the air inlet grille.  
 Lift the air inlet grille up to the horizontal position.

**2**

Grasp the left and right handles of the air filter and lift it up slightly, and then pull it downward to take it out from the filter holder.

**3**

Use a vacuum cleaner to remove the dust from the filters or wash them with water.  
 After washing the air filters, dry them in the shade.
