[Page 56](#) Function Description Support □ <Check Command Sequence> When selected, a command, which checks whether any command is missing from a command string the printer received, is attached. □ <Command Protocol> Specifies the command control code. □ <Bluetooth Connection > □ <Dlay Close>...

[Page 57](#) Function Description Support <Job Verification> Allows selecting the timing of status monitoring. <Communication> Allows setting the timeout and polling interval. □ About tab License Shows the license information. □ Version Shows the driver version, settings, and PC information. The shown information can be stored in a file. Reference: A part of the above settings can be changed in the print dialog box of the application, but such changes may only temporary take effect.

[Page 58: Page Setup Tab](#)

Page Setup Tab Clicking on the Page Setup tab allows you to specify the default media size, orientation, and other properties of the media. Note: When printing on the shared printer, specify the orientation and media size on the client PC from which a print job is sent.

[Page 59: Registering A New Stock Or Editing The Existing Stock](#)

Effects Mirror Image When this checkbox is checked, the print will be a mirror image. Negative When this checkbox is checked, the print will be white on black. Depending on the printer models, the selectable options differ. ...

[Page 60](#) Displays the advanced stock properties. ID Displays the ID for the stock being edited. (257 to 32767) Change the stock ID if mismatching in the stock IDs between the older printer driver and the new one causes an error. For example, when printing is performed from the application which manages stock types for Excel, Access, etc.

[Page 61](#) Label Size Width, Height Specifies the height and width of a label stock size. Exposed liner width Left, Right Specifies the distance between the edges of the paper backing and the edges of the label. (Set the same value for the left and right.) Note: For the B-SP2D, B-419, and B-431 models, set the both exposed liner widths to 0 mm.

[Page 62: Preset](#)

3.1.2 Preset By clicking the [Manage] button in the Page Setup page, the following screen display will appear to allow you to manage the printer settings with a name. Preset Management New After configuring the necessary print settings for a selected stock, click the [New] button, name these print settings to manage them as a preset, and enter a description of these settings in the "Description"...

[Page 63: Advanced Options](#)

3.1.3 Advanced Options Clicking the [Advanced Options] button allows control of the printer options for which the printer driver does not provide explicit control. Printing Position Position Adjustment tab Horizontal Offset Enables adjustment of the print position in the horizontal direction.

[Page 64](#) Function Character When a bar code font is used for printing, use of the function character enables encoding binary data. The default setting is a caret [^] (5EH). The following explanation is based on an assumption that the caret [^] (5EH) is used. Entry in hex.

[Page 65](#) Disable Copies Limit: When this checkbox is checked, a value greater than 9999 can be set for the Default Copies. Since this feature is not supported, do not change the default setting. Disable User-Defined Paper Size: This feature disables the user-defined paper size "USER". When this checkbox is checked, "USER" cannot be used.

[Page 66: Graphics Tab](#)

Graphics Tab Clicking the Graphics tab enables adjustment of dithering or color tone. Resolution Enables selecting the print head resolution. Only the resolutions supported by the printer model can be specified. Dithering Enables creating the illusion of different shades of gray by varying the pattern of dots. The more dither patterns that a device or program supports, the more shades of gray it can represent.

[Page 67: Stock Tab](#)

Stock Tab Clicking the Stock tab allows setting various print conditions specific to the printer, such as the media settings, issue settings, and fine adjustments. Media Settings Print Method Enables selecting the print method. • Direct thermal • Direct thermal (Head up) •...

[Page 68](#) Sensor Enables selecting a sensor type. • None • Reflective • Transmissive • Transmissive (Manual Threshold) • Reflective (Manual Threshold) • Transmissive (Clothing Tags) • Lower Reflective (Black mark on the reverse side) • Lower Reflective (Manual Threshold) • Upper Reflective (Black mark on the print side) •...

[Page 69: Fine Adjustment](#)

Occurrence Enables specifying how often labels should be cut. If the "Strip Mode (with Back Feed)" is selected for the Issue Mode, this feature is disabled. • After every page -----
----- Cuts labels after each label is finished printing. •...

[Page 70: Options Tab](#)

Options Tab Models other than B-EP2DL-G, B-EP4DL-G and B-FP3D B-EP2DL-G, B-EP4DL-G and B-FP3D Graphic Options Transfer Mode Basically, select the "TOPIX Allows selecting the

method used to download graphics to the printer. compression” mode. The “TOPIX compression (XOR)” method improves the throughput by processing only a different part from the previous page.

[Page 71: Multiple Part Print Area Settings \(B-Ev4 \(203 Dpi\) Only\)](#)

Supply Options Allows setting the printing energy for each of the “Direct thermal” and “Thermal transfer”. When “Use Current Print Setting” is selected, the printer operates according to the currently selected setting. Selection of “Direct thermal” or “Thermal transfer” depends on which is selected for the “Print Method” on the Stock page.

[Page 72](#) Multiple Part High Density Print Area Enables setting the “Multiple Part High Density Print Area Offset (c)” (X-coordinate of the multiple part high density print area start position) and “Multiple Part High Density Print Area Length (d)”. This area is to be printed with much higher print energy than the multiple part print area to enable clearly printing small or fine characters and bar codes on the second sheet.

[Page 73: Ribbon Adjustments](#)

3.4.2 Ribbon Adjustments Clicking on the [Ribbon Adjustments] button on the Options page enables ribbon settings. Ribbon Type When the “Set” checkbox is checked, configurations related to the ribbon is allowed. When unchecked, the printer operates according to the currently selected settings. This menu is provided only to the models for which a ribbon type is selectable.

[Page 74: Fonts Tab](#)

Fonts Tab Clicking the Fonts tab of the Properties screen enables adding, deleting, modifying, importing, exporting, and viewing currently defined bar code fonts. These fonts will be listed in many Windows applications that normally do not support printing bar codes. Although they will not appear as bar codes on the screen, they will print as bar codes.

[Page 75](#) Delete Enables deleting the currently selected bar code font. Select a bar code font, then click the [Font] button and the “Delete” or right-click the font and select the “Delete”. View Enables filtering the bar code font types to display. “Resident Fonts” and “Bar code fonts” are available. Supplement: The bar code font list on the [Fonts] page only shows the font types usable by the applicable printer driver.

[Page 76](#) Bitmap Font Settings List Bitmap Fonts: When this checkbox is checked, the bitmap fonts can be used on the application. When not checked, the bitmap fonts cannot be used. Simulate Scalable Fonts: When this checkbox is checked, the size of bitmap fonts can be specified to the same size of outline fonts.

[Page 77](#) Encoding tab Text Encodings Enables setting the code page for the data to be printed in the resident fonts. Wrong code page setting causes the printer not to print properly. Since this feature is not supported, do not change the default setting.

[Page 78: Bar Code Font](#)

3.5.1 Bar Code Font When you click the [Font] button in the [Fonts] page and select the “New Bar Code Font”, the following screen appears to enable addition of a new bar code font. Also, you can modify the registered bar code font properties. First select the bar code font to edit, then click the [Font] button in the [Fonts] page and select the “Edit”...

[Page 79](#) Bar Code Options Symbology Enables selecting a type of the bar code or two dimensional code from the following. • Code 39 - Full ASCII • Code 39 - Regular • Code 93 • Code 128 • Codabar NW-7 •...

[Page 80: Tools Tab](#)

Tools Tab Clicking the Tools tab enables testing the printer operations or setting variable options. Printer Print Generic test Prints an image “TEST” on a label on the print conditions (Media size, position adjustment, sensor type, etc.) specified in the Stock page. This should help verify that the computer being used is communicating with the printer.

[Page 81](#) Manage XML Data Print Files Enables managing the format, graphic, and font files related to the XML data in the printer. This feature is not supported Reset Printer Enables

resetting the printer. This is available only when the RS-232C interface is used. []...

[Page 82](#) Include Job Information: When this checkbox is checked, the job information obtained from the printer through the SNMP feature is added to those to be printed. This information is displayed on the Network Tool. Note: This feature is disabled as default. If you do not need the job information on the SNMP, do not change the default setting.

[Page 83](#) Erase Memory When the “Erase Memory” is clicked, the screen on the right is displayed to enable formatting the specified flash memory. When the [OK] button is clicked, the memory format is executed. Ribbon Settings When the “Ribbon Settings” is clicked, the screen on the right appears to enable fine adjustment of the ribbon motor voltages.

[Page 84](#) Reset to Defaults: Allows restoring the checked items to the factory default. Bar Code and RFID Fonts Registered bar code fonts Network Settings Setup information of the [Network Settings] Presets Registered preset lists Printer Properties Settings of stocks, graphics, print conditions, and various print configurations. []...

[Page 85](#) Measurement System: Allows selecting the desired unit of measure. Units • Use Windows Setting • Inches • Millimeters • Centimeters Windows Settings: Displays the “Regional and Language Options” of Windows. Printer Specifications tab Unprintable Width: Allows making minor adjustments in the horizontal positioning of the printed image on the label.

[Page 86](#) Logging Options Supports logging print jobs and recording printer code to files for debugging purposes. This feature is available only when the “Bi-directional support” is enabled. Logging tab Enables recording printed pages and job history to a file or as event logs. Only the Legacy Log, created by clicking the [Tools] button and “Add Legacy Log”, is supported.

[Page 90: Designation Of Printer Font](#)

Supplement: • The name of the printer fonts (bar code or 2D code fonts) for the Toshiba TEC bar code printers starts with “TEC”, like “TEC Kanji”. Although the “TEC ***” fonts do not appear as bar codes on the screen, they will be converted by the driver into the desired bar codes.

[Page 91](#) Restrictions of Bar Code Fonts • Depending on the applications, bar code fonts may not be listed in the font types. Make sure that the application used supports the printer fonts. • Bar code fonts do not appear as bar codes on the document of the application. Instead, characters or symbols are displayed.

[Page 92](#) • When a control code or special code is used with the bar code font specified, refer to the following table and enter the corresponding data. In the case a caret “^” is used, enter “^^” because the caret “^” is the default function character. If the function character is changed from “^”...

[Page 93](#) Correspondence table of the specified size of TEC Kanji and actually printed size
