[Page 5: Scope](#)

1. SCOPE This specification applies to the external equipment interface for use with the models, B-EV4 series general-purpose thermal label/tag printers. 2. GENERAL DESCRIPTION The external equipment interface connects a printer to the host computer through a serial interface (RS-232C), parallel interface (Centronics), USB, or a network for making various settings and printing labels.

[Page 6: Interface](#)

3. INTERFACE 3.1 SERIAL INTERFACE (1) Type : Conforming to RS-232C (2) Mode of Communication : Full duplex (3) Transmission Speed : 2400 bps 4800 bps 9600 bps 19200 bps 38400 bps 57600 bps 115200 bps (4) Synchronization Method : Start-stop synchronization (5) Start Bit : 1 bit (6) Stop Bit...

[Page 7](#) (13) Transmission Control : XON/XOFF (DC1/DC3) Protocol READY/BUSY (DTR) Protocol XON/XOFF (DC1/DC3) Protocol + READY/BUSY (DTR) Protocol RTS Protocol XON/XOFF (DC1/DC3) Protocol When initialized after power on, this printer becomes ready to receive data and sends an XON code (11H). (Transmission or non-transmission of the XON code is selectable by means of the parameter setting.) The printer sends an XOFF code (13H) when the blank positions in the receive buffer become 1K bytes or less.

[Page 8](#) XON/XOFF (DC1/DC3) Protocol + READY/BUSY (DTR) Protocol When initialized after power on, this printer becomes ready to receive data and turns the DTR signal to "High" level (READY). The printer also sends an XON code (11H). When the blank positions in the receive buffer are 1K bytes or less, the printer turns the DTR signal to "Low"...

[Page 15: On-Line Mode Functions](#)

4.2 ONLINE MODE FUNCTIONS The online mode provides the following functions for issuing labels. (1) Issuing labels (by external equipment interface commands) (2) Paper feed (by the [FEED] key) (3) Pause (by pressing the [FEED] key while printing) (4) Error indication (5) Sensor selection Transmissive sensor, reflective sensor and non-sensor mode are available.

[Page 16: Transmission Sequence](#)

5. TRANSMISSION SEQUENCE This section describes the outline of the transmission sequence.
5.1 INITIALIZATION Writable characters, logo, and PC interface commands must be stored before the label issue operation. (1) Storing writable characters and logo Power ON <New> (Add/change) [ESC] J1: Formats the flash memory on the Flash Memory memory board.

[Page 17](#) (2) Storing PC interface commands Power ON <New> (Add/change) [ESC] J1: Formats the flash memory on the Flash Memory memory board. Format Command [ESC] XO: Declares the start of saving PC interface Save Start Command commands. [ESC] D: Sets the label size. Label Size Set Command Position Fine [ESC] AX: Adjusts the feed length, cut position, and...

[Page 18: Label Issue Operation](#)

5.2 LABEL ISSUE OPERATION An example of the label issue operation is described below. (1) Where the Saved Data Call Command is not used: Power ON Place paper [ESC] D: Sets the label size. Label Size Set Command Position Fine [ESC] AX: Adjusts the feed length, cut position, and Adjust Command back feed length.

[Page 19](#) (2) Where the Saved Data Call Command is used: Power ON [ESC] XQ: Calls the label format stored in the flash Place paper memory. Saved Data Call Command Feed Command [ESC] T: Feeds one sheet of paper and aligns it with the first printing position.

[Page 20: Interface Commands](#)

6. INTERFACE COMMANDS 6.1 OUTLINE OF COMMANDS (1) Format of Interface command Command & Data LF NUL The length from [ESC] to [LF] [NUL] must be as specified by each command. There are the following three kinds of control codes: ESC (1BH), LF (0AH), NUL (00H) (7BH), | (7CH), }...

[Page 21](#) NOTES: 1. If a command is not recognized as a command, it is ignored. e.g.) [ESC] H, [ESC]AA, and so on. 2. If the number of digits of the parameter is specified, when the number of input digits does not match the specified number of digits, a command error occurs.

[Page 22: List Of Commands](#)

[Page 24: Commands For Creating Application](#)

6.3 COMMANDS FOR CREATING APPLICATION 6.3.1 LABEL SIZE SET COMMAND [ESC] D Function Sets the size of a label or tag. Format [ESC] Daaaa, bbbb, cccc (,dddd) [LF] [NUL] Term aaaa:

Pitch length of the label or tag 4 and 5 digits (in 0.1 mm units) 4 digits: 203dpi Max.

[Page 25](#) [Tags] Black mark Black mark (Back side of print) (Back side of print) Origin of coordinates (0, 0) Effective Effective pitch pitch print length print length Origin of coordinates Effective Effective (0, 0) print width print width Paper feed direction Paper feed direction [Print direction: Printing bottom first] [Printing direction: Printing top first]...

[Page 26](#) [mm] Model 203 dpi model 300 dpi model Item Issue mode Batch Strip Cutter Batch Strip Cutter Thermal head dot density 8 dots/mm (203 dpi) 11.8 dots/mm (300 dpi) Thermal head width 105.7 A: Label/tag pitch Min. 25.4 25.4 25.4 25.4 Label Max.

[Page 27](#) The tag rotation designation of the Issue Command ([ESC] XS) causes the origin of drawing coordinates to be origin in the case of “printing bottom first” and to be origin in the case of “printing top first”, as shown in the figure. The parameters must be as shown in the figure and table.

[Page 28: Position Fine Adjust Command](#)

6.3.2 POSITION FINE ADJUST COMMAND [ESC] AX Function Adjusts the feed value so that the label will be shifted forward or backward from the automatically set first print start position. Adjusts the cut position so that the label will be cut at a position shifted forward or backward from the automatically set cut position, or adjusts the strip position so that the label will be shifted forward or backward from the automatically set strip position.

[Page 29](#) Explanation [Feed Length Fine Adjustment] (To finely adjust the feed for shifting backward or forward) 0.0 mm One label First print position +3.0 mm One label First print position -3.0 mm One label Paper feed direction First print position [Cut Position Fine Adjustment] (To finely adjust the cut position for shifting backward or forward) 0.0 mm Cut position...

[Page 30](#) [Strip Position Fine Adjustment] 0.0 mm +3.0 mm -3.0 mm Printing in strip issue mode is stopped at the position where the distance from the middle point of the label-to-label gap to the 3 mm end of the strip shaft is 3 mm, since the label-to-label gap is 2 mm assumed to be 2 mm.

[Page 31](#) Notes If the feed value fine adjustment, cut position (or strip position) fine adjustment or back feed value fine adjustment has been set in system mode (key operation on the printer), the fine adjustment value will be the fine adjustment in system mode. The max.

[Page 32](#) Examples Cut issue 3.5 mm Preprinted 2.0 mm 2.0 mm Finely adjust the print position by +2.0 mm. Finely adjust the cut position by +3.5 mm. Finely adjust the back feed value by +1.0 mm. (3.0 - 2.0 = 1.0) 3.0 mm Paper feed [ESC] AX;...

[Page 33: Print Density Fine Adjust Command](#)

6.3.3 PRINT DENSITY FINE ADJUST COMMAND [ESC] AY Function Adjusts the automatically set print density. Format [ESC] AY; abb, c [LF] [NUL] Term Indicates whether to increase or decrease the density. +: Increase (darker) -: Decrease (lighter) Print density fine adjustment value 00 to 10 (in units of 1 step) Indicates the mode for fine adjustment, thermal transfer or direct thermal.

[Page 34: Image Buffer Clear Command](#)

6.3.4 IMAGE BUFFER CLEAR COMMAND [ESC] C Function Clears the image buffer for drawing characters, lines, bar codes, and graphics. Format [ESC] C [LF] [NUL] Explanation After changing the label size, the image buffer must be cleared. The increment/decrement designation (described later) is valid until the Image Buffer Clear Command is transmitted.

[Page 35: Clear Area Command](#)

6.3.5 CLEAR AREA COMMAND [ESC] XR Function Clears the designated area or reverses the white/black dot pattern in the designated area in the drawing area. Format [ESC] XR; aaaa, bbbb, cccc, dddd, e [LF] [NUL] Term aaaa: Designated area start point X-coordinate Fixed as 4 digits (in 0.1 mm units) bbbb: Designated area start point Y-coordinate...

[Page 36](#) [Effective print area] [mm] Model 203 dpi 300 dpi Item Issue mode Batch Strip Cutter Batch Strip Cutter Min. Effective print width Max. 108± 0.2 105.7± 0.2 Min. 21.4 17.4

21.4 17.4 Label Effective print Max. 148.2 453.2 148.2 449.2 length Min.

[Page 37: Line Format Command](#)

6.3.6 LINE FORMAT COMMAND [ESC] LC Function Sets the line format and draws the line. Format [ESC] LC; aaaa, bbbb, cccc, dddd, e, f (, ggg) [LF] [NUL] Term aaaa: Start point X-coordinate Fixed as 4 digits (in 0.1 mm units) bbbb: Start point Y-coordinate 4 or 5 digits (in 0.1 mm units)

[Page 38](#) [Line] (1) Horizontal line (In the case of $|Y| = 0$) Line width (2) Vertical line (In the case of $|X| = 0$) Line width $| \leq |Y$ (3) Slant line A ($|X$ (4) Slant line B ($|X| >...$

[Page 39](#) [Rectangle] (1) Radius of rounded corners = 000 or parameter omitted Line width Line width Line width Line width (2) Radius of rounded corners \neq 000 Line width Radius Line width Notes In line designation, a horizontal line, vertical line, or slant line A/B is drawn according to the start and end point coordinates.

[Page 40](#) Programming the radius of the rounded corner is effective only when the type of line is 1 (rectangle). When the type of line is 0, designation of the radius is ignored. When the type of line is 1, and the radius of the rounded corner is 000 or omitted, a rectangle is printed.

[Page 41: Bit Map Font Format Command](#)

6.3.7 BIT MAP FONT FORMAT COMMAND [ESC] PC Function Sets the format indicating on the label at which the bit map font is to be printed and how it is to be printed. Format [ESC] PCaaa; bbbb, cccc, d, e, ff (, ghh), ii, j (, Jkkll) (, Mm) (, nooooooooo) (, Zpp) (, Pq) (=rrr-----rrr) [LF] [NUL] [ESC] PCaaa;...

[Page 46](#) M: Presentation N: Letter Gothic O: Prestige Elite P: Prestige Elite Q: Courier R: Courier S: OCR-A T: OCR-B U: Kanji (16 \times 16) V: Kanji (24 \times 24) W: Kanji (32 \times 32) Fine adjustment of character-to-character space If no character-to-character space is specified or the number of space dots between characters is 0, drawing will take place according to the horizontal spacing/proportional spacing determined for each character.

[Page 47](#) Rotational angles of a character and character string Sample Origin 0 $^\circ$ (00) 90 $^\circ$ (11) 180 $^\circ$ (22) 270 $^\circ$ (33) (01) (12) (23) (30) 01, 12, 23, and 30 are available only to the font type of U, V, and W. Selection of character attribution No.

[Page 48](#) Check digit to be attached When Modulus 10 or Modulus 43 is selected, the check digit of a data row is calculated and attached to the data row for drawing. When DBP Modulus 10 is selected, the check digit of a data row is calculated and only the check digit is drawn.

[Page 49](#) (11) Zero suppression No. of zeros to be suppressed Data 0000 0000 0000 0A12 0123 0123 0123 Print 0000 0123 0123 The leading zero(s) in a data row is replaced by a space(s) according to the designated number of digits. However, if the number of digits to be

suppressed is greater than the data row, the data row will be drawn without zero suppression.

[Page 50](#) (13) Data string to be printed Drawing data can be programmed by designating the number of digits after the symbol “=” Up to 255 digits can be printed. If the number of digits exceeds 255, the excessive data will be discarded. For the character code table, refer to the character code table mentioned later.

[Page 51](#) Notes The check digit attach, increment/decrement, and zero suppress processes are performed according to the following priority. If any of the conditions is improper, no drawing will take place. For example, the zero(s) is replaced by a space(s) as a result of zero suppression but the modulus 10 designated to be attached cannot be calculated.

[Page 52](#) The Bit Map Font Format Command may be connected to the Outline Font Format Command when transmitted. [ESC] P C001; 0100, 0150, 1, 1, A, 00, B [LF] C002; 0350, 0180, 1, 1, A, 00, B [LF] C005; 0200, 0300, 25, 2, C, +05, 00, B, +0000000001 [LF] V01;...

[Page 137](#) [In the case a subsequent normal printing area is merged.] Label pitch (50.0mm) Effective print length (48.0mm) Effective print width (104.0mm) A=5.0mm B=Duplicate printing area (40.0mm) C=3.0mm Print direction Because C is less than 5.0 mm, that area is merged into the duplicate printing area.

[Page 138](#) [In the case both preceding and subsequent normal printing areas are merged.] Label pitch (50.0mm) Effective print length (48.0mm) Effective print width (104.0mm) A=3.0mm B=Duplicate printing area (42.0mm) C=3.0mm Print direction Because A and C are less than 5.0 mm, respectively, those areas are merged into the duplicate printing area.

[Page 139: Feed Command](#)

6.3.15 FEED COMMAND [ESC] T Function Feeds the paper. Format [ESC] Tabcde [LF] [NUL] Term Type of sensor 0: No sensor 1: Reflective sensor 2: Transmissive sensor (when using normal labels) 3: Transmissive sensor (when using normal labels) 4: Reflective sensor Selects cut or non-cut 0: Non-cut 1: Cut...

[Page 140](#) Reflective sensor: Media feed takes place according to the parameter designated by the Label Size Set Command. However, the black mark provided on the back side of the tag paper is automatically sensed by the reflective sensor and the stop position is fine adjusted.

[Page 141](#) [C: Batch (Cut)] "With automatic forward feed standby" selected in the system mode. Cut position Head position (1) Place paper. (2) End of feed (Completes feeding to the top of form) (3) Feeds to the cut position. (4) Cuts unnecessary paper. (5) Feeds back to the home position.

[Page 142](#) (4) Feed speed • A feed is performed at the designated speed. However, the back feed speed in the cut mode or the strip mode is 3"/sec. • The possible issue speed varies according to types and sizes of the paper supply.

[Page 143](#) Examples 41.0 76.2 mm S a m p l e 73.2 15.0 mm 82.0 mm Paper feed direction [ESC] D0762, 0820, 0732 [LF] [NUL] [ESC] AX; +010, +000, +10 [LF] [NUL] [ESC] T11C30 [LF] [NUL] [ESC] C [LF] [NUL] [ESC] PC001; 0150, 0410, 1, 1, A, 00, B [LF] [NUL] [ESC] RC001;...

[Page 144: Eject Command](#)

6.3.16 EJECT COMMAND [ESC] IB Function Ejects (cuts) the label presently remaining between the head and the cutter and returns to the original position. Format [ESC] IB [LF] [NUL] Notes When “with automatic forward feed standby” is selected by the parameter setting and if no subsequent command from the PC is received within 3 second after ejection, the printer automatically performs a 16.3-mm forward feed.

[Page 145: Forward/Reverse Feed Command](#)

6.3.17 FORWARD/REVERSE FEED COMMAND [ESC] U1, [ESC] U2 Function After printing or feeding the paper, feeds the paper to a manually cut position. When issuing the next label, feeds the paper back to the first printing position. Format Forward Feed [ESC] U1;...

[Page 146](#) Examples Cut position Head position (1) Idling (2) Feeds one label (3) Feeds to the position at which a label can be cut manually. (4) Cut manually. (5) Standby (6) Feeds back to the home position (7) Prints three A labels (8) Feeds to the position at which labels can be cut manually.

[Page 147: Storage Area Allocate Command](#)

6.3.18 STORAGE AREA ALLOCATE COMMAND [ESC] XF Function Allocates the storage area in flash ROM on the CPU board. Format [ESC] XF; aa, bb [, cc] [, Ed] [LF] [NUL] Term aa: Size of the TrueType font storage area 00 to 11 (0 KB to 704 KB) (in units of 64 KB) bb: Size for bit map Writable character storage area 00 to 11 (0 KB to 704 KB)

[Page 148](#) (7) When “00” (0 KB) is specified for the TrueType font storage area, the bit map writable character storage area, or the spare storage area, the storage area is not allocated. (8) When “11” (704 KB) is specified for any of the TrueType font storage area, the bit map writable character storage area, and the spare storage area, all storage areas are used.

[Page 149: Flash Memory Format Command](#)

6.3.19 FLASH MEMORY FORMAT COMMAND [ESC] J1 Function Formats (initializes) the flash ROM on the CPU board for storage. Format [ESC] J1; a (, b) [LF] [NUL] Term Formatting (initializing) range Entire area of the flash memory (PC save area + writable character area) PC save area of the flash memory Writable character storage area of the flash memory True Type area...

[Page 150: Sd Card Format Command](#)

6.3.20 SD CARD FORMAT COMMAND [ESC] JA Function Formats (initializes) the SD card for storage. Format [ESC] JA; a (, b) [LF] [NUL] Term Formatting (initializing) range for SD card All area PC save area Bitmap writable character storage area True Type area Drive (Omissible, If omitted, flash ROM on the CPU board is selected.) 0: Flash ROM on the CPU board...

[Page 151: Bit Map Writable Character Command](#)

6.3.21 BIT MAP WRITABLE CHARACTER COMMAND [ESC] XD Function Writes writable characters and logos in SD card, or flash ROM on the CPU board. Format For SD card or flash ROM on the CPU board [ESC] XD; (Sj,) aa, b, ccc, ddd, eee, fff, ggg, h, iii ----- iii [LF] [NUL] Term Sj: Drive 0: Flash ROM on the CPU board...

[Page 152](#) The configuration of the writable character file stored in SD card is as follows. 1st byte No. of dots for left offset 2nd byte (from upper to lower) 3rd byte No. of dots for top offset 4th byte (from upper to lower) 5th byte No.

[Page 153](#) • How to assign the directory name for a writable character set → Directory name for writable character 01 “0100” → Directory name for writable character 02 “0101” → Directory name for writable character 39 “0126” → Directory name for writable character 40 “0127”...

[Page 154](#) offset 22 dots Char. height 31 dots Base line Reference Reference point point of next char. Left Char. width offset 26 dots Horizontal spacing/proportional spacing 30 dots Writable character set: 01 to 40, 51 to 55 Char. width 26 dots Nibble mode •...

[Page 155](#) [Nibble mode] (1) The writable character data to be stored is separated into four dot units and sent in the → following order (1 248). (High order digit: “3”) (2) The data of writable characters to be stored is 30H to 3FH. (3) The minimum unit in the X direction is 8 dots.

[Page 156](#) Notes (1) No matter what character set or character code is selected, no memory will be wasted. When a new writable character is stored, Flash Memory Format Command ([ESC] J1) must be transmitted. A character code already stored can be stored in SD card again if the Writable Character Command ([ESC] XD) is transmitted, but memory will be consumed with every storage.

[Page 157](#) Examples Writable character set: Writable character code offset 22 dots Char. height 31 dots Base line Reference Reference point of next point char. Left offset Char. width 26 dots 2 dots Horizontal spacing/proportional spacing 30 dots [ESC] J1; C [LF] [NUL] [ESC] XD;...

[Page 158: Graphic Command](#)

6.3.22 GRAPHIC COMMAND [ESC] SG Function Draws graphic data. Format [ESC] SG; aaaa, bbbb, cccc, dddd, e, ggg --- ggg [LF] [NUL] [ESC] SG0; aaaa, bbbb, cccc, dddd, e, ffff, ggg --- ggg [LF] [NUL] Term aaaa: Print origin of X-coordinate for drawing graphic data Fixed as 4 digits (in 0.1 mm units) bbbb: Print origin of Y-coordinate for drawing graphic data...

[Page 159](#) Explanation When the graphic data "0", "1", "2", "3", "6", or "A" is selected, the graphic data is drawn by overwriting the image buffer. When the graphic data "4" or "5" is selected, the graphic data is drawn by carrying out OR between the graphic data and the data in the image buffer.

[Page 160](#) Print origin of coordinates Graphic width 19 dots Nibble mode • • • • • Graphic height • 22 dots • 126 30H 127 33H 128 3FH 129 30H 130 30H 131 30H 132 30H Hex. mode • • •...

[Page 166: Save Start Command](#)

6.3.23 SAVE START COMMAND [ESC] XO Function Declares the start of saving PC interface commands. (Places the printer in the mode where PC interface commands are written in SD card, or flash ROM on the CPU board.) Format [ESC] XO; aa, (Sb,) c [LF] [NUL] Term Identification number to be used for saving in the SD card or calling 01 to 99...

[Page 167: Save Terminate Command](#)

6.3.24 SAVE TERMINATE COMMAND [ESC] XP Function Declares the termination of saving PC interface commands. Format [ESC] XP [LF] [NUL] Note If the storing operation is not continued after storing the PC interface command, the printer enters the online mode (label issue operation) after about 10 seconds. In this case, the image buffer will be cleared automatically.

[Page 168: Saved Data Call Command](#)

6.3.25 SAVED DATA CALL COMMAND [ESC] XQ Function Calls PC interface commands saved in SD card, or flash ROM on the CPU board. Format [ESC] XQ; aa, (Sb,) c, d [LF] [NUL] Term Identification number of the file to be called from SD card 01 to 99 Drive from which the command is called b: Drive...

[Page 169: Reset Command](#)

6.3.26 RESET COMMAND [ESC] WR Function Returns the printer to its initial state. Format [ESC] WR [LF] [NUL] Explanation The printer is returned to the same state as when the power was turned on. When the printer receives this command during printing, it returns to its initial state after issuing the label which is being printed.

[Page 170: Status Request Command](#)

6.3.27 STATUS REQUEST COMMAND [ESC] WS Function Sends the printer status to the host computer. Format [ESC] WS [LF] [NUL] Explanation This command makes the printer send its status regardless of the setting of "status response/no status response." The status to be transmitted is the current printer status, and indicates the latest status only.

[Page 171: Receive Buffer Free Space Status Request Command](#)

6.3.28 RECEIVE BUFFER FREE SPACE STATUS REQUEST COMMAND [ESC] WB Function Sends information on the printer status and the free space of the receive buffer to the host computer. Format [ESC] WB [LF] [NUL] Explanation This command makes the printer send information on its status and free space of the receive buffer regardless of the setting of "status response/no status response."...

[Page 172](#) Notes This command is available only for the RS-232C, USB interfaces and socket communications. The printer returns the status only for the interface which sent this command to the host. After the code of the Writable Character Command ([ESC] XD) or Graphic Command ([ESC] SG) is received, the Status Request Command is not processed until the printer receives the data specified for the type of data.

[Page 173: Version Information Acquire Command](#)

6.3.29 VERSION INFORMATION ACQUIRE COMMAND [ESC] WV Function Sends information such as the program version of the printer. Format [ESC] WV [LF] [NUL] Explanation (1) The format of the program version data (total 27 bytes of data) to be returned to the host is as follows.

[Page 174: Sd Card Information Acquire Command](#)

6.3.30 SD CARD INFORMATION ACQUIRE COMMAND [ESC] WI Function Sends information regarding the use of the memory board to the host. Format [ESC] WI; a, b [LF] [NUL] Term Drive 1: Slot 1 SD card (Option) 2: Slot 1 SD card (Option) Information to be acquired A: Free space B: Bitmap...

[Page 175](#) C: Stored PC command save file Stored PC command save file name SOH STX "C" Slot ETX EOT 0DH 0AH File name 1 00H File name 2 00H ... File name n 00H File name (including expansion): Slot: "00H" should be placed between file "1"...

[Page 176: Printer Information Store Command](#)

6.3.31 PRINTER INFORMATION STORE COMMAND [ESC] IG Function Sets the printer information. Format [ESC] IG; aaa --- aaabbb --- bbb [LF] [NUL] Term aaa --- aaa: Model name (Fixed as 20 digits) 20H to 7FH of ASCII codes bbb --- bbb: Serial No.

[Page 177: Printer Information Request Command](#)

6.3.32 PRINTER INFORMATION REQUEST COMMAND [ESC] IR Function Retrieves the printer information. Format [ESC] IR [LF] [NUL] Explanation (1) The model name and serial No. set by the Printer Information Store Command ([ESC] IG) are retrieved [Information field] Model name Serial No.

[Page 178: Ip Address Set Command](#)

6.3.33 IP ADDRESS SET COMMAND [ESC] IP Function Sets the IP address to be required for the network connection. Format [ESC] IP; a, bbb, ccc, ddd, eee [LF] [NUL] Term a: IP address to be set 2: Printer IP address (Initial value: 192.168.10.20) 3: Gateway IP address (Initial value:

0.0.0.0)

[Page 179: Socket Communication Port Set Command](#)

6.3.34 SOCKET COMMUNICATION PORT SET COMMAND [ESC] IS Function Enables or disables the socket communication, and sets the communication port number to be used. Format [ESC] IS; a, bbbb [LF] [NUL] Term 0: Socket communication is disabled. 1: Socket communication is enabled. bbbbb: Port number (It must be set in 5 digits.) 00000 to 65535...

[Page 180](#) 6.3.35 DHCP FUNCTION SET COMMAND [ESC] IH Function Enables or disables the DHCP function, and sets the DHCP client ID. Format [ESC] IH; a, bbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbb [LF] [NUL] Term 0: DHCP function is disabled. 1: DHCP function is enabled. bbbbbbbbbbbbbbbbbbbbbbbbbbbbbbb: DHCP client ID (16-byte data is described in 32-byte hexadecimal.) Explanation "FFH"...

[Page 189: Parameter Set Command](#)

(zero) 6.4.3 BATCH RESET COMMAND [ESC] Z0 Function Resets the printer. Format [ESC] Z0 [LF] [NUL] Explanation • This command is not executed until the printer enters an idle state. • Some values in the Parameter Set Command ([ESC] Z2;1) and the Fine Adjustment Value Set Command ([ESC] Z2;2), will become effective when the printer is initialized.

[Page 190: Control Code Selection](#)

7. CONTROL CODE SELECTION (1) Automatic Selection This printer automatically selects [ESC] (1BH), [LF] (0AH), [NUL] (00H) or {(7BH), | (7CH).} (7DH) as an interface command control code. After the power is turned on, the program checks the data from the host for [ESC] and { and assumes the data whichever has been sent first to be a control code.

[Page 191: Error Processing](#)

8. ERROR PROCESSING If the printer detects any of the following errors, it will display the error message (LED), makes status response (serial interface, parallel interface and USB interface), and stops its operation. 8.1 COMMUNICATION ERRORS (1) Command Errors An error results if a command length error, command transmission sequence error, command format error or parameter designation error is found in analyzing the command.

[Page 192](#) (2) Cutter Error • Cutter When the cutter does not move from the cutter home position 50 msec or more after the cutter solenoid is driven, an error will result. The cutter moves from the home position, however, it does not return to the home position after 500 msec.

[Page 193: Errors In Writable Character And Pc Command Save Modes](#)
