Remove and Replace the Ballast/Power Supply Insulator

The ballast/power supply insulator provides electrical insulation between the power supply, ballast and chassis.

WARNING

The insulator must always be installed between the ballast and power supply and the chassis. Inspect the gasket closely whenever the ballast or power supply is removed. Never use a gasket with holes or tears.

The lamp connector retainer fastens to the chassis near the thermal switch. It holds the lamp connector securely in the lamphouse.

1.

Remove the following items:

Ballast (see page 7)

Power supply (see page 43)

2.

Tilt the ballast/power supply insulator away from the front wall of the chassis and the ballast mounting standoffs. Then lift the insulator out of the projector.

Assembly Notes

Position the ballast/power supply insulator in the chassis so that the holes in the bottom of the insulator align with the ballast mounting slots and power supply standoffs that protrude from the floor

of the chassis. Then press the insulator over the ballast mounting standoffs on the front of the chassis.
