"DRY" () Operation

How it works?

Clicking Sound

Clicking sound is heard from the air conditioner

Remote control unit

18

Special Remarks

If the room temperature is higher than the setting temperature, the air conditioner operates in the same way as during cooling operation. When the room temperature approaches the setting temperature, the air conditioner switches to DRY operation and the

indoor fans operate irregularly.

In addition, the outdoor unit continues operation at lowered capacity, and repeats the cycle of operation and shutdown if the room temperature drops further.

If the outdoor unit stops when the room temperature is less than 20 °C, the indoor fan also stops. If the room temperature is less than 15 °C, both the indoor fan and outdoor unit stop.

In cooling operation, any plastic parts may expand or shrink due to a sudden temperature change. In this event, a clicking sound may occur. This is normal, and the sound will soon disappear.

The remote control unit sends the setting condition to the air conditioner regularly at five minute intervals.
