Troubleshooting

•

Bookmarks

If your air conditioner does not work properly, first check the following points before requesting service. If it still does not work properly, contact your dealer or service center.

Trouble

Air conditioner does not run at all.

Compressor runs but soon stops.

Poor cooling performance.

The air conditioner is operable within the temperature ranges as listed below:

COOLING

* Only for CL Models.

01-201-23EG

Downloaded from

Troubleshooting

Possible Cause

1. Power failure.
2. Leakage breaker tripped.
3. Line voltage is too low.
4. ON/OFF operation button is OFF.
5. Batteries in remote control unit have run down.

1. Obstruction in front of condenser coil.

1. Dirty or clogged air filter.
2. Heat source (cooker, heater, or electrical appliance) or many people in room.

3. Doors and/or windows are open.

4. Obstacle near air intake or air discharge port.

5. Thermostat is set too high.

Tips for Energy Saving

Do not

Block the air intake and outlet of the unit. If either is obstructed, the unit will not work well, and may be damaged.

Let direct sunlight into the room. Use sunshades, blinds or curtains. If

the walls and ceiling of the room are warmed by the sun, it will take longer to cool the room.

Do

Always try to keep the air filter clean. (Refer to "Care and Cleaning.")

A clogged filter will impair the performance of the unit.

To prevent conditioned air from escaping, keep windows, doors and any other openings closed.

Should the power fail while the unit is running

NOTE

If the power supply for this unit is temporarily interrupted the unit will automatically resume operation (once the power is restored) with the same settings that were in effect before the power was interrupted.

Operating Range

Temperature

Indoor air temperature

Max.

95 °F DB/71 °F WB

Min.

67 °F DB/57 °F WB

Remedy

- 1. Restore power.
- 2. Contact service center.
- 3. Consult with electrician or dealer.
- 4. Press the button again.
- 5. Replace batteries.
- 1. Remove obstruction.
- 1. Clean the air filter to improve the air

flow.		
2. Eliminate heat source if possible.		
3. Shut them to keep the heat out.		
4. Remove it to ensure good air flow.		
5. Set the temperature lower.		
Outdoor air temperature		
115 °F DB		
67 °F DB *(0 °F DB)
