If Something Goes Wrong

Sound system problems

You press the disc eject button, but the drive tray does not slide out.

Make sure the computer is connected to a power source and turned on. The optical disc drive eject mechanism requires power to

operate.

Make sure a program is not accessing the drive and preventing it from ejecting.

If you need to remove a disc and cannot turn on the computer (for example, if the battery is completely discharged), use a narrow object, such as a straightened paper clip, to press the manual eject button. This button is in the small hole next to the optical disc drive eject button on the face of the optical disc drive tray.

Some discs run correctly but others do not.

Check that the type of disc you are using is compatible with your optical disc drive. For more information regarding supported optical media formats, refer to the complete detail specifications for

your computer at pcsupport.toshiba.com.

If the problem is with an optical data disc, refer to the software's documentation and check that the hardware configuration meets the

program's needs.

CAUTION

The disc will not come out of the drive when you click the eject button on the screen.

Press the button on the optical disc drive itself. For additional information see

[does not slide out.](#) on page

ManualsLib.com

Sound system problems

No sound is coming from the computer's speakers.

Adjust the volume control.

Try pressing

Check that the volume control on the computer is turned up.

If you are using external headphones or speakers, check that they are securely connected to your computer.

Never use a pencil to press the manual eject button. Pencil lead can break off inside the computer and damage it.

["You press the disc eject button, but the drive tray](#)

Fn + Esc

to see if volume mute is disabled.
