## Running the computer on battery power

The computer contains a removable Lithium-Ion (Li-ion) battery pack that provides power when you are away from an AC outlet. You can recharge it many times.

## Battery Notice

Battery life may vary considerably from specifications depending on product model, configuration, applications, power management settings and features utilized, as well as the natural performance variations produced by the design of individual components. Published battery life numbers are achieved on select models and configurations tested by Toshiba at the time of publication. See "Detailed Specs" for specific battery measurement test. Recharge time varies depending on usage. Battery may not charge while the computer is consuming full power. After a period of time, the battery will lose its ability to perform at maximum capacity and will need to be replaced. This is normal for all batteries. To purchase a new battery pack, see the accessories information that shipped with your computer or visit the Toshiba web site at [www.accessories.toshiba.com](http://www.accessories.toshiba.com). To ensure that the battery maintains its maximum

capacity,

operate the computer on battery power at least once a month

until the battery is fully discharged. Please see

["battery life" on page 121](#)

continuously operated on AC power, either through an AC

adapter or a docking station (if applicable to your system), for

an extended period (more than a month), the battery may fail

to retain a charge. This may shorten the life of the battery, and

the battery light may not indicate a low-battery condition.

Running the computer on battery power for procedures. If the computer is
