Your computer's TFT display**Your computer's TFT display**

Small bright dots may appear on your screen display when you turn on your computer. Your display contains an extremely large number of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology. Over a period of time, and depending on

the usage of the computer, the brightness of the screen will deteriorate. This is also an intrinsic characteristic of the screen technology. When the computer is operated on battery power, the screen will dim and you may not be able to increase the brightness of the screen while on battery power.

Inserting a PC Card

Before you insert a PC Card, refer to the documentation that comes with the card to see if you need to do anything before you insert it. You may insert one Type I or Type II card into the computer's PC Card slot.

To insert a PC Card:

1

Locate the PC Card slot on the side of the computer.

2

Insert the PC Card.

(Sample Illustration) Inserting a PC Card

3

When the card is almost all the way into the slot, push firmly but gently to ensure a firm connection with the computer. Do not force the card into position.

You may first need to remove the card slot protector before you can insert a card.
