# Connecting a DTV receiver/set-top box with component video and a VCR

This connection allows you to watch DTV (digital TV broadcast), VCR, and TV programs, and record DTV and TV programs. You can record from one source while watching a program from another source.

Your TV has ColorStream (component video) inputs. Connecting your TV to a component video-compatible DTV receiver can greatly enhance picture quality and realism.

You will need:

- one coaxial cable
- three pairs of audio cables (two single and one pair of audio
- cables for a mono VCR)
- two video cables

 one set of ColorStream (component video) cables (one S-video cable for a non-ColorStream DTV receiver; see notes at right)
Stereo VCR

## From antenna IN from ANT OUT to TV TV S-VIDEO VIDEO L/ MONO AUDIO R VIDEO-1 VIDEO-2 From DTV antenna Satelite IN S-VIDEO DTV receiver with component video VIDEO AUDIO OUT L Y COMPONENT VIDEO VIDEO OUT

#### Note:

For the highest possible picture quality, use ColorStream (component video) cables between the TV and DTV receiver. You can connect the ColorStream cables from the DTV receiver to either ColorStream jack on the TV (HD1 or HD2).

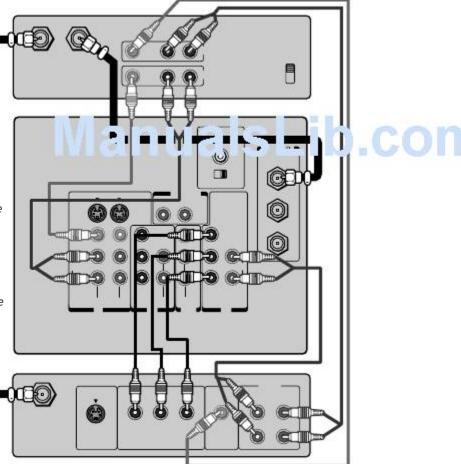

The ColorStream HD1 and HD2 jacks can be used with Progressive (480p) and Interlace (480i,1080i) scan systems.

If your DTV receiver is not ColorStreamcompatible, use the S-video connections (both audio and video) instead of the ColorStream connections. Do not connect both S-video and ColorStream cables between the TV and DTV receiver at the same time.

To record from the DTV receiver, set the VCR to Line IN. To monitor recording from the DTV receiver, set the VCR to Line IN, and set the TV to Video-1.

#### Caution:

The unauthorized recording of television programs, videotapes, DVDs, and other materials may infringe upon the provisions of

, copyright laws.
