Wireless communication switch

You can enable or disable Wireless communication functions, with the on/off switch. No transmissions are sent or received when the switch is off. Slide the switch forward to turn it on and backward to turn it off.

Wireless communication Indicator

The wireless communication indicator shows the status of the computer's wireless communication functions.

Indicator status

Indicator off

Indicator glows

If you used the Taskbar to disable the wireless LAN, restart the computer or perform the following procedure to re-enable it: Start -> Control Panel -> System and Maintenance -> System -> Device Manager -> Network adapters and right click the wireless device then choose enable.

LAN

The computer has built-in support for Ethernet LAN (10 megabits per second, 10BASE-T), Fast Ethernet LAN (100 megabits per second, 100BASE-TX) and Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T).

This section describes how to connect/disconnect to a LAN.

Do not install or remove a memory module while Wake-up on LAN is enabled.

The Wake-up on LAN function consumes power even when the system is off. Leave the AC adaptor connected while using this feature.

The Link speed (10/100/1000 megabits per second) changes automatically depending on the network conditions (connected device, cable or noise and so on).

User's Manual

TECRA A10/S10/M10/SatellitePro S300

in the United States.

Indication

The wireless communication switch is off -
no wireless functionality is available.

Wireless communication switch is on. Except for the stopped device by the software switch, all the wireless-communications functions can output a radio wave.

in Europe or
