TECRA A10/S10/M10/SatellitePro S300

Radio Characteristics

Radio Characteristics of Wireless LAN module may vary according to:
Country/region where the product was purchased

Type of product ■

■
Wireless communication is often subject to local radio regulations.

Although Wireless LAN wireless networking products have been designed for operation in the license-free 2.4GHz and 5GHz band, local radio regulations may impose a number of limitations to the use of wireless communication equipment.

Refer to the "Information sheet" for regulatory information that may apply in your country/region.

Radio Frequency

The range of the wireless signal is related to the transmit rate of the wireless communication. Communications at lower transmit range may travel larger distances.

The range of your wireless devices can be affected when the antennas are placed near metal surfaces and solid high-density materials.

Range is also impacted due to "obstacles" in the signal path of the radio that may either absorb or reflect the radio signal.

Supported Frequency Sub-bands

 Subject to the radio regulations that apply in the countries/regions, your Wireless LAN module may support a different set of 5 GHz/2.4 GHz channels. Consult your Authorized Wireless LAN or TOSHIBA Sales office for information about the radio regulations that apply in the countries/regions.

C-2

Band 5GHz (5150-5850 MHz)

(Revision a and n draft 2.0)

Band 2.4GHz (2400-2483.5 MHz)

(Revision b/g and n draft 2.0)
