NOTE

Using the computer for the first time

The computer is now ready for you to turn it on and begin using it.

Opening the display panel

1

Slide the display latch to the right.

2

Lift the display panel.

(Sample Illustration) Opening the display panel

NOTE

Small bright dots may appear on your screen display when you turn on your computer. Your display contains an extremely large number

of thin-film transistors (TFT) and is manufactured using high-precision technology. Any small bright dots that may appear on your display are an intrinsic characteristic of the TFT manufacturing technology. Over a period of time, and depending on the usage of the computer, the brightness of the screen will deteriorate. This is also an intrinsic characteristic of the screen technology. When the computer is operated on battery power, the screen will dim and you may not be able to increase the brightness of the screen while on battery power.

Using the computer for the first time

Battery life and charge time may vary depending on the applications, power management settings, and features used.

When opening or closing the display panel, place one hand on the palm rest to hold the computer in place and use the other hand to slowly open or close the display panel.

To avoid damaging the display panel, do not force it beyond the point where it moves easily and never lift the computer by the display panel.

Do not press or push on the display panel and be careful to remove any pens or other objects from the keyboard area before closing the display panel.
