Exploring Your Options

Using PC Cards

Inserting a module into the Modular Bay

To install a module into the Modular Bay, simply slide the module all the way into the Modular Bay.

Using PC Cards

PC Cards expand your computer's capabilities and usefulness. You can purchase additional PC Cards from your

dealer. Most PC Cards conform to the PCMCIA (Personal Computer Memory Card International Association) standard.

Your computer has two stacked PC Card slots and supports

three types of PC Cards:

Two Type I and Type II cards.

One Type III card.

Check the documentation that came with the PC Card to see

if it conforms to the PCMCIA 2.1 standard, or later. Other cards may work with your computer, but are likely to be much more difficult to set up and use.

PC Card supporting software

PC Cards require Card and Socket Services software — a set

of programs that acts as a translator between the PC Card and

the computer, and that makes hot swapping (switching

cards

while the computer is on) possible.

The operating system provides the Card and Socket Services

for your PC Card. Even if your PC Card comes with its own

version of Card and Socket Services, you should use the files

included in the operating system.
