For detailed information, refer to your operating system's documentation.

Internet problems

My Internet connection is very slow.

Many factors contribute to the speed with which you can surf the Internet. They include: modem speed, time of day (when everyone else is surfing, your access can be slow) and popularity of the site. If accessing a particular site is very slow, try later.

My browser can't find the URL address I typed in.

Make sure you separated the domain names of the address with the forward slash (/). Check the spelling of each name and the syntax of the address carefully. A single incorrect letter or missed character, comma instead of period ("dot") or other mistake makes it impossible for your browser to locate the site.

My browser can't find a site I bookmarked.

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today or its server may be down for temporary repair. Try again later.

®

The Windows

operating system is not working

Safe Mode (with Command Prompt)

Enable Boot Logging

Enable VGA Mode

Last known good configuration (your most recent settings that worked)

Directory services restore mode (Windows controllers only)

Debugging Mode

Start Windows

Reboot

If Something Goes Wrong
