If Something Goes Wrong

Resolving a hardware conflict

theory, if every device connected to the computer is Plug and

Play-compliant, no two devices will compete for the same system resources. Simply plug in the device and turn on

your computer. The operating system automatically sets up your system to accommodate the new device.

If you install an older (legacy) device that the operating system cannot recognize, the operating system may have

difficulty assigning resources to it. As a result, a hardware

conflict can occur. To see what resources the operating system has assigned to the device, see

[properties" on page](#)

Resolving conflicts

There are three things you can do to resolve hardware conflicts:

Disable the device.

For an older device, remove it from the computer. For a Plug and Play device.

Disable another system component and use its resources for the new device.

Reconfigure the device so that its requirements do not conflict. Refer to the device's documentation for

instructions about changing settings on the device.

Fixing a problem with Device Manager

Device Manager provides a way to check and change the configuration of a device.

177.

Changing the default settings using Device Manager can cause other conflicts that make one or more devices unusable. Device Manager is a configuration tool for advanced users who understand configuration parameters and the ramifications of changing them.
