## 4

Enter the phone number of your network connection and let the program dial the number.

The computer connects with the network.

## **Powering down the computer**

When you power down the computer, you have three options

to choose from: Turn Off, Stand By, and Hibernation. You can set the computer to turn on automatically at a time you designate. This option is helpful for transferring files by

modem at night. You can set the computer to turn on and send

or receive the files while you are asleep. This option is called

Auto Power On.

Pushing the power button before shutting down the Windows operating system could cause you to lose your work. Make sure the system indicator panel's disk light and the drive-in-

use light are off. If you turn off the power while a disk is being accessed, you may lose data or damage the disk and/or drive.

**CAUTION**

TECHNICAL NOTES: Before using any of these options to power down your computer, save your files and make sure the disk activity lights are off.

If you change your mind and decide to continue working after all, wait a few seconds before turning the computer on again.

## **Learning the Basics**

*Powering down the computer*
