## Bookmarks

The battery may not start charging immediately under the following conditions:

---

The battery is extremely hot or cold.  
To ensure that the battery charges to its full capacity, wait until it reaches room temperature.

The battery is almost completely discharged. Leave the power connected and the battery should begin charging after a few minutes.

## Charging the RTC battery

Your computer has an internal real-time clock (RTC) battery.

The RTC battery powers the System Time Clock and BIOS memory used to store your computer's configuration settings.

When fully charged, it maintains this information for up to a month when the computer is powered off.

The RTC battery may have become completely discharged

while your computer was shipped, resulting in the following

error message during startup:

BAD RTC BATTERY

BAD CHECKSUM (CMOS)

CHECK SYSTEM

### NOTE

If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date, or stop working.

To recharge the RTC battery, connect the computer and leave

it powered on for 24 hours.

The above error message may vary by computer model.

The RTC battery does not charge while the computer is turned off even when the AC adapter is charging the computer.

## **Mobile Computing**
