Examine the disc to see whether it is dirty. If necessary, wipe it with a clean damp cloth dipped in water or a neutral cleaner.

Replace the disc in the tray. Make sure it is lying flat, label side uppermost. Press the disc down until it locks on the spindle. Close the drive tray carefully, making sure it has shut

completely.

You press the disc eject button, but the drive tray does not slide out.

Make sure the computer is connected to a power source and

turned on. The DVD-ROM or multi-function drive eject mechanism requires power to operate.

To remove a disc without turning on the computer, use a narrow object, such as a straightened paper clip, to press the

manual eject button. This button is in the small hole next to

the disc eject button on the right side of the computer.

Some discs run correctly, but others do not.

If the problem is with an application CD-ROM, refer to the software's documentation and check that the hardware configuration meets the program's needs.

Sound system problems

You do not hear any sound from the computer.

Adjust the volume control.

If you are using external headphones or speakers, check that

they are securely connected to your computer.

The computer emits a loud, high-pitched noise.

This is feedback between the microphone and the

speakers. It occurs in any sound system when input from a microphone is fed to the speakers and the speaker volume is too loud.

Adjust the volume control.

Changing the settings for the Record Monitor feature in the Recording Control Utility (default Off), or the Mute feature

If Something Goes Wrong

Resolving a hardware conflict
