Battery Notice

Battery life may vary considerably from specifications depending on product model, configuration, applications, power management

settings and features utilized, as well as the natural performance variations produced by the design of individual components.

Published battery life numbers are achieved on select models and configurations tested by Toshiba at the time of publication.

Recharge time varies depending on usage. Battery may not charge

while the computer is consuming full power.

After a period of time, the battery will lose its ability to perform at

maximum capacity and will need to be replaced. This is normal for

all batteries. To purchase a new battery pack, see the accessories information that shipped with your computer or visit the Toshiba Web site at accessories.toshiba.com. Use only batteries designed to work with your Toshiba notebook computer.

To ensure that the battery maintains its maximum capacity, operate

the computer on battery power at least once a month. The Lithium-Ion battery has no memory effect so it is not necessary to let the battery fully discharge each time. However, for better accuracy of

the battery meter, it is helpful to fully discharge the battery periodically. Please see

procedures. If the computer is continuously operated on AC power,

either through an AC adaptor or a port replicator (if applicable to your system), for an extended period (more than a month), the battery may fail to retain a charge. This may shorten the life of the battery, and may cause the battery meter to be inaccurate.

NOTE

The computer also has an internal real-time-clock (RTC) battery. The RTC battery powers the RTC memory that stores your system configuration settings and the current time and date information. It

maintains this information for up to a month while the computer is

turned off.

Running the computer on battery power

["Maintaining your battery" on page 115](#)

For optimum DVD performance, it is recommended that you play DVDs while running the computer on AC power.

TECHNICAL NOTE: The RTC battery does not charge while the computer is turned off, even when AC power is attached.

The RTC battery charges only while the computer is powered on.
