If Something Goes Wrong

The Windows® operating system is not working

When you highlight each option using the arrow keys, Windows displays information about each option at the bottom after

Description.

See your Windows

NOTE

Internet problems

My Internet connection is very slow.

Many factors contribute to the speed with which you can surf the Internet. They include: network speed, network conditions, time of

day (when everyone else is surfing, your access can be slow) and popularity of the sites you are trying to access. If accessing a particular site is very slow, try later.

My browser cannot find the URL address I typed in.

Make sure you separated the domain names of the address with the

forward slash (/). Check the spelling of each name and the syntax of

the address carefully. A single incorrect letter or missed character

will make it impossible for your browser to locate the site.

My browser cannot find a site I bookmarked.

The World Wide Web is constantly changing. A site you bookmarked yesterday may not be available today or its server may

be down for temporary repair. Try again later.

Safe Mode with Command Prompt

Enable Boot Logging

Enable low-resolution video (640x480)

Last Known Good Configuration (advanced)

Directory Services Restore Mode

Debugging Mode

Disable automatic restart on system failure

Disable Driver Signature Enforcement

®

Start Windows

®

documentation for further explanation.

If your computer is connected to a network, the Startup menu may display different versions of Safe mode.
