If Something Goes Wrong

Resolving a hardware conflict

Check the port settings to make sure the hardware and software are

referring to the same COM port. See

[on page](#)

Check the communications parameters (baud rate, parity, data length and stop bits) specified in the communications program.

It

should be set up to transmit at 300, 1200, 2400, 4800, 9600, 14400,

28800, 33600 bps (bits per second) or higher. Refer to the program's documentation and the modem manual for information

on how to change these settings.

The modem is on, set up properly but still does not transmit

or receive data.

Make sure the line has a dial tone. Connect a telephone handset to the line to check this.

The other system may be busy or off line. Try making a test transmission to someone else.

For more information regarding your system's V.92 modem, visit the Toshiba Web site at pcsupport.toshiba.com.

Wireless networking problems

NOTE

If your computer is equipped with an internal Wi-Fi verify that the Wi-Fi will be lit).

ManualsLib.com

NOTE

Verify that signal strength is good using the utility provided with the Wi-Fi

109.

This section provides general troubleshooting tips for networking

problems, specifically wireless (Wi-Fi

The terms and concepts used assume a basic understanding of networks, and may be for more advanced users. If you need assistance or if you are not familiar with the terminology, please see
