Removing a memory module

If you need to remove a memory module:

1

Complete steps

[page 48](#)

module slot cover.

NOTE

2

Pull the latches away from the memory module.

The memory module pops up slightly.

NOTE

1-8

to shut down the computer and open the memory

Do not try to remove a memory module with the computer turned on.

You can damage the computer and the memory module.

Do not remove the memory module while the computer is in Sleep or Hibernation mode. The computer could hang up the next time you turn it on and data in memory will be lost. In either of the above cases, the Sleep configuration will not be saved.

The following screen appears when you turn on the power:

®

If "Start Windows

If one of the Safe Mode options is highlighted, it is best to press Enter to go into Safe Mode, then shut down and restart the system, at which time Windows

When Safe Mode is suggested, this could be a sign that you may need to scan your hard drive for errors or defragment the drive. If so,

®

consult Windows

If your system has the memory modules stacked on top of one another, you must remove the top module first before removing/installing the bottom module.

Getting Started

Adding memory (optional) in

"Installing a memory module" on

Normally" is highlighted, then press Enter.

®

should boot back up normally.

Help and Support.
