Learning the Basics

Backing up your work

3

Specify the print parameters. For example, the range of pages and number of copies to print.

4

Click Print.

Backing up your work

Back up all the files you create in case something happens to your computer. You can back up your files to different types of media such as CDs, DVDs, diskettes, or to a network, if available.

To back up several files at one time, use the Microsoft backup program preinstalled on the computer's hard disk. Also see ["Backing up your data or your entire computer with the Windows®](#)

[operating system"](#) on page

Small files can be backed up on diskettes if an optional external diskette drive is available.

Restoring your work

To restore information from your backup media to your hard disk,

use the Restore page in the backup program. Look in the online Help or your operating system documentation for information on restoring files.

Using the optical drive

Optical storage has become the preferred medium for software, music, and video. Digital versatile discs (DVDs) provide a significant increase in data storage and support features that are not

available on any other video platform. These features include wide-

screen movies, multiple language tracks, digital surround sound, multiple camera angles, and interactive menus.

For these reasons, your computer may come with an optical drive.

HINT: Backing up all the files on your hard disk may take a considerable amount of time and multiple CDs/DVDs. You may

prefer to use a high-capacity backup system, such as an external hard drive.

TECHNICAL NOTE: When restoring files, the backup program prompts you if you try to overwrite a file that already exists on the hard disk. Make sure the backup version is the one you want before overwriting the existing file.
