Mobile Computing

Monitoring main battery power

These power-saving options control the way in which the computer is configured. By using them, you can greatly increase the length of time you can use the computer before

you need to recharge the battery.

These options are combined into preset power schemes that

let you choose between maximum power savings and peak system performance. You may also set individual power-saving options to suit your own needs.

Power Schemes

You can choose a power scheme, and either use its predefined

settings, or customize the settings as you require. To do this:

1

Click Start, Control Panel.

2

Double-click the Power Options icon.

The Power Options Properties window appears.

3

Click the Power Schemes tab and select a power scheme.

(Sample Illustration) Power Schemes tab in Power Options
