[Page 46: Important Information On Your Computer's Cooling Fan](#)

Getting Started Setting up your computer Important information on your computer’s cooling fan Your computer may have a CPU cooling fan that cools the CPU by drawing outside air into the computer. Always make sure your computer and AC adaptor have adequate ventilation and are protected from overheating when the power is turned on or when an AC adaptor is connected to a power outlet (even if your computer is in Sleep mode).

[Page 47: Connecting To A Power Source](#)

TOSHIBA Battery Charger (that may have been provided with your computer), or use AC adaptors and battery chargers specified by TOSHIBA to avoid any risk of fire or other damage to the computer. Use of an incompatible AC adaptor or Battery Charger could cause fire or damage to the computer possibly resulting in serious injury.

[Page 48](#) Getting Started Connecting to a power source To connect AC power to the computer: Connect the power cord/cable to the AC adaptor. [Page 54: Installing A Memory Module](#)

Getting Started Adding memory (optional) Installing a memory module Memory modules can be installed in the memory module slots on the base of the computer. You will need a small Phillips screwdriver for this procedure. If the computer has been running recently, the memory module(s) may be hot.

[Page 55](#) If the computer is on, begin at step 1; otherwise, skip to step 3. Click Start, and then click the arrow next to the lock button in the lower-right corner of the Start menu. The Shut Down menu appears. Start (Sample Image) Shut Down menu Click Shut Down.

[Page 56](#) Getting Started Adding memory (optional) Using a small Phillips screwdriver, loosen the captive screws that secure the memory module slot cover. Front of computer (Sample Illustration) Removing the memory module slot cover Remove the memory module slot cover. Place the screws and the cover in a safe place so that you can retrieve them later.

[Page 57](#) NOTE If your system has the memory modules stacked on top of one another, you must remove the top module first before removing/installing the bottom module. NOTE For this model, Slot A is the bottom slot. Slot B is the top slot. If only one memory module is to be installed, it must be installed in Slot A.

[Page 58](#) Getting Started Adding memory (optional) Once the module's connector is fully inserted into the socket, press downward on the top edge of the module to seat the module into the latches at the sides of the socket. These latches should "snap" into place securely with the corresponding cutouts in the side of the module.

[Page 59: Removing A Memory Module](#)

NOTE For this model, Slot A is the bottom slot. Slot B is the top slot. If only one memory module is to be installed, it must be installed in Slot A. Replace the memory module slot cover and secure it using the screws.

[Page 60](#) Getting Started Adding memory (optional) NOTE The following screen may appear when you turn on the power: If “Start Windows If one of the Safe Mode options is highlighted, it is best to press to go into Safe Mode, then shut down and restart the system, at Enter which time Windows When Safe Mode is suggested, this could be a sign that you may...

Connecting a printer NOTE Your printer documentation may require you to install the printer software before physically connecting the printer to your computer. If you do not install the software as instructed by the printer manufacturer, the printer may not function correctly. Read the documentation that came with your printer.

[Page 82: Setting Up A Printer](#)

Getting Started Turning off the computer Setting up a printer NOTE Some printers require a specific installation process. Refer to your printer installation guide for instructions before completing the following procedure. If your printer does not support Plug and Play, follow these steps to set it up for the first time.

[Page 83: Options For Turning Off The Computer](#)

Options for turning off the computer Depending on the operating system installed, you have more than one option available for turning off the computer: Shut Down, Hibernate, and Sleep. Each option has its advantages. Use the Shut Down or Hibernate command if you will not be using the computer for several days or if you must turn off your computer.

[Page 84](#) Getting Started Turning off the computer For information on how to use and configure Hibernation mode see “Using and configuring Hibernation mode” on page Sleep mode The Sleep command places the computer into a power-saving mode. Sleep saves the current state of the computer to memory so that, when you restart the computer, you can continue working from where you left off.

[Page 85: Using The Shut Down Command](#)

Using the Shut Down command The Shut down command completely shuts down the computer without saving your work or the current state of the computer. This command closes all open programs, shuts down the operating system, and then turns off your computer. Use the following steps to turn off your computer using the Shut Down command: Click Start, and then click the arrow next to the Lock button in...

[Page 95: Chapter 2: Learning The Basics](#)

Chapter 2 Learning the Basics This chapter gives some computing tips and provides important information about basic features. Computing tips Save your work frequently. Your work stays in the computer's temporary memory until you save it to the internal storage drive. If the network you are using goes down and you must restart your computer to reconnect, or your battery runs out of charge while you are working, you will lose all work since you last saved.

[Page 96](#) Learning the Basics Computing tips Back up your files to external media on a regular basis. Label the backup copies clearly and store them in a safe place. It is easy to put off backing up because it takes time. However, if your internal storage drive suddenly fails, you will lose all the data on it unless you have a separate backup copy.

[Page 97: Using The Keyboard](#)

Using the keyboard Your computer's keyboard contains character keys, control keys, function keys, and special Windows (Sample Illustration) Keyboard Character keys Typing with the character keys is very much like typing on a typewriter, except that: The space bar creates a space character instead of just passing over an area of the page.

[Page 101: Saving Your Work](#)

Saving your work Before you turn off the computer using the Shut Down command, save your work on the internal storage drive, diskette, flash media, or optical disc. This is one of the most important rules of computing. When you turn off the computer using the Sleep or Hibernate commands, your work should be there when you resume.

[Page 102: Printing Your Work](#)

Learning the Basics Printing your work HINT: To make another copy of the file you are currently working with, click File, and then Save As, and give the new file a different name. File names The Windows contain up to 260 characters and can include spaces. Some applications do not support long file names and require file names limited to no more than eight characters.

[Page 103: Backing Up Your Work](#)

In your Windows The program displays a Print dialog box. (Sample Image) Print dialog box Specify the print parameters. For example, the range of pages and number of copies to print. Click Print. Backing up your work Back up all the files you create in case something happens to your computer.

[Page 104: Restoring Your Work](#)

This is normal for all batteries. To purchase a new battery pack, see the accessories information included with your computer or visit the Toshiba Web site at accessories.toshiba.com. Use only batteries designed to work with your Toshiba computer.

[Page 115: Power Management](#)

Never leave batteries in the battery charger for more than a week at a time. Doing so may reduce the potential charge of the battery. Always use the battery charger specified by Toshiba. You can order a Toshiba battery charger from Toshiba's Web site at accessories.toshiba.com.

[Page 116: Charging The Main Battery](#)

Mobile Computing Charging batteries Charging the main battery To charge the main battery while it is in your computer, plug the computer into a live electrical outlet. The battery charges whether the computer is on or off. TECHNICAL NOTE: The recharging of the battery cannot occur when your computer is using all of the power provided by the AC adaptor to run applications, features, and devices.

[Page 117: Monitoring Main Battery Power](#)

To recharge the RTC battery, plug the computer into a live electrical outlet and leave the computer powered on for 24 hours. NOTE It is seldom necessary to charge the RTC battery because it charges while the computer is on. If the RTC battery is low, the real-time clock and calendar may display the incorrect time and date or stop working.

[Page 118: Determining Remaining Battery Power](#)

Mobile Computing Monitoring main battery power HINT: Be careful not to confuse the battery light (light (the keyboard). When the ON/OFF light or power button light flashes amber, it indicates that the system is suspended (using the Windows operating system Sleep command).

[Page 119: What To Do When The Main Battery Runs Low](#)

Move the cursor over the power icon in the Notification Area, see "Finding your way around the desktop" on page 132 information on the Notification Area.
