Internet chat rooms

A chat room is a Web site that offers a place where people with similar interests and ideas communicate in real-time, one-on-one or in groups, by typing messages which are instantly viewed by others on their computer screens.

Internet news groups

A news group is similar to a chat room, but instead of using a dedicated site to converse about a specialized subject with others in real-time, it uses a Web site as a clearinghouse where all the messages are placed, like a gigantic bulletin board.

Blogs

A blog is an online journal where an individual, group, or corporation can offer a record of activities, thoughts, or beliefs.

Materials are mostly written, but videos, audio, and images are widely used elements as well. Some blogs present original material, while others operate mainly as news filters, bringing in various online sources and adding short comments and Internet links. They may also provide a forum to encourage visitors to leave comments and to interact with the publisher.

Message boards

A Message board is a script on a Web site with a submission form that allows visitors to post messages (called "threads" or "posts") on that Web site for others to read that pertain to a particular subject, and unlike blogs, are generally short messages. These messages may be sorted within discussion categories, or topics, chosen by the host, or even the visitor. A message board may also be called a "Web board" or a "forum."

Online shopping

Many Web sites offer products and services for sale.

Uploading to, and downloading files from, the Internet

Transferring files from one computer to another is termed uploading (transferring data from your computer to a site on the Web), or downloading (transferring data from a site on the Web to your computer).

There are several ways to upload or download data. It can be as simple as attaching a file or document to an email, or you can use the File Transfer Protocol (FTP) features of your Web browser to transfer large amounts of data.
