Getting Started

Recovering the Internal Storage Drive

8

Click Next.

A confirmation message displays reminding you that all data will be lost during the recovery process. Be sure to save your work to external media before proceeding.

9

Click Next to begin the recovery.

When the process is complete, a message displays indicating that the C: drive has been recovered.

10

Press any key on the keyboard to restart the computer.

Recovering without changing the internal storage drive partitions

NOTE

You can recover the C: drive without affecting other partitions by either using the utilities stored on your computer's internal storage

drive or by using recovery media, if you have created recovery discs. To recover using the first method, follow the procedure below. To recover using the second method, see

[recovery media" on page](#)

CAUTION

To recover using the utilities on your computer's internal storage drive:

1

Make sure the computer is turned off.

Press and hold the 0 (zero) key on your keyboard while

2

powering on the computer.

3

If your system offers a choice of Windows Vista

64-bit operating system, select one at this time. If not, skip to step 4.

Recovering without changing the internal storage drive partitions deletes all information stored on the C: drive. Be sure to save your work to external media before executing the recovery. If you have

created other partitions (for example, a D: drive), those partitions will remain intact and any information on them will not be affected.

During the internal storage drive recovery process it is strongly recommended that your computer be connected to an external power source via the AC adaptor.
