Appendix C

TOSHIBA PC

Health Monitor

The TOSHIBA PC Health Monitor software program monitors

computer system functions such as power consumption, the cooling system and the 3D Accelerometer. It alerts users to specific system conditions via pop-up messages. It also tracks the usage of the computer and related devices and logs service relevant information on the computer's internal storage drive.

The collected information includes device operation time and number of Actuations or status changes (i.e.: number of power button and HDD, sound volume, wireless communication switch, docking and USB information), date of initial system use, and also computer and device usage (i.e.: power settings, battery temperature and recharging, CPU, memory, backlight illumination time, and temperatures for various devices). The stored data uses a very small

portion of the total hard disk capacity (approximately 3 MB or less per year).

This information is used to identify and provide a notification of system conditions that may affect the performance of your Toshiba computer. It may also be used to help diagnose problems should the

computer require service by Toshiba or Toshiba's authorized service providers. Additionally, Toshiba may also use this information for quality assurance analysis.
