Call Park Orbits parks a station to hold and allows retrieval from any extension station in the system. Group Paging can be invoked immediately after parking.

Orbit means a location to park a call. There are two types of orbit:

1. An individual orbit number for every extension identified by PDN.
2. A system orbit number managed by the system.

An extension station parks a call by the following three methods.

1. Use the orbit number identical to the PDN of the operating station (Local Park).
2. Specify the orbit number identical to the PDN of another extension

(Remote Park).

3. The System specifies the orbit number (Automatic Park).

There are three types of Call Park depending on how to specify the orbit

To invoke Local Park, put the destination in an extension station on Consultation Hold and enter the access code or press the function button PARK.

This feature can also be invoked by pressing the function button directly during conversation. Then, the orbit number is requested. However, if the IPedge / VIPedge Feature Desc. 7/25/12
