DIGITAL INPUT/OUTPUT RELAY INTERFACE BMS-IFDD 02 E 2 • Thank you very much for purchasing this TOSHIBA Digital Input/Output Relay Interface. • Please read this manual carefully beforehand for proper installation of the relay interface. CONTENTS Precautions for Safety .....1 Introduction .....

### [Page 2: Precautions For Safety](#)

Precautions for Safety • Read these "Precautions for Safety" carefully before installation. • The

precautions described below include important items regarding safety. Observe them without fail. • After the installation work, perform a trial operation to check for any problem. Follow the Owner's Manual to explain how to use and maintain the unit to the customer.

Introduction nApplications/Functions/Specifications Applications/Functions/Specifications • Applications The Digital Input/Output Relay Interface is used to control air conditioners by interlocking them with electric lock signals and fire alarm signals, and to transmit air conditioner failures to other devices. Functions • The Digital Input/Output Relay Interface connects non-voltage contact signals, transmits their input status to the Touch Screen Controller, and outputs signals from the contacts (open collector) according to the command from the Touch Screen Controller.

Connection of Power cables/Earth wires/ Signal wires CAUTION The RS-485 signal wire has polarity. Connect A to A, and B to B. If connected with incorrect polarity, the unit will not work. REQUIREMENT Disconnect the appliance from the main power supply. This appliance must be connected to the main power supply by a circuit breaker or switch with a contact separation of at least 3mm.

[Page 7](#) Connection of Power cables/Earth wires/ Signal wires (continued) Wiring Connection CAUTION If an inductive load (relay coil) or a bulb is connected, a surge voltage or rush current will be generated. Take adequate measures against surge voltage or rush current. The following describes wiring connections of the Digital Input/Output Relay Interface when it is used in the air conditioner control system.

Trial Operation Check Before starting trial operation Turn on the power of the Digital Input/Output Relay Interface after all cable connections and settings are completed. Turn on power of the air conditioning control system. Trial operation • Confirming external input connection In the test mode, when the external inputs connected to the input terminals DI-1 to DI-8 are ON, the respective LEDs will goes on so you can confirm the connection.
