Page 30 As stated above, variations in SAR values
If this equipment does cause harmful interference to radio or television
between different model phones do not mean variations in safety. SAR reception, which can

the interference by one or more of the following
values at or below the federal standard of 1.6 W/kg are considered safe measures:
for use by the public. -Reorient or relocate the receiving antenna.
The highest reported SAR values A5514SA are: -
Increase the separation between the equipment and receiver. CDMA modes(Part 22)-
 Head: 0.359 W/kg; Body-worn: 0.528 W/kg -
Connect the equipment into an outlet on a circuit different from that to
which the receiver is connected. FCC Radio Frequency Emission -
Consult the dealer or an experienced radio/TV technician for help.
This phone meets the FCC Radio Frequency Emission Guidelines. FCC
ID number: NRNA5514SA. More information on the phone's SAR can be Cautions
found from the following FCC website: http://www.fcc.gov/oet/fccid.
