## Summary of Contents for Toshiba TOSDIC-CIE DS

[Page 1](#) MENU Toshiba Integrated Control System SVR-DS System Function Manual 6F8C0791...

[Page 2](#) First Edition July, 1999 The contents of this manual may be revised without notice. © Copyright 1998 by Toshiba Corporation. All rights reserved. No part of this manual may be reproduced in any form without permission.

[Page 3](#) Safety Precautions Safety Precautions The instruction manual and the labels affixed to the products or equipment give important information for using products safely. It helps prevent

damage to properties and hazard to people who use them or work with them. Make yourself familiar with the signal words and signs in this page, then read the safety precautions that follow and always follow the instructions to avoid hazards.

[Page 4](#) Safety Precautions Confirmation of product safety label Confirm that product safety labels are put on the front panel of the power supply module. If the label is lost or soiled, inform TOSHIBA Corporation. 1. Safety Precautions for Installation WARNING Grounding required: To avoid the risk of electric shock or fire, be sure to ground the equipment.

[Page 5](#) Safety Precautions 2. Safety Precautions for Inspection and Maintenance WARNING Turn off power: Turn off power before attaching or detaching modules or before connecting devices. Failure to do so may result in electric shock or equipment fault. Make sure that power is off: Always check and make sure that the external power is turned off before installing or removing modules.

[Page 6](#) Turn off power in the event of a problem: If the temperature in or around the equipment becomes abnormally high or an unusual fault occurs in the equipment, stop using it and turn off power, then contact your Toshiba representative. If left alone, overheat may result in fire.

[Page 7](#) Safety Precautions CAUTION Do not touch components: Do not touch pins, connectors or soldered surfaces in modules with any part of your body. Static electricity may damage IC's or LSI's and cause equipment to fail. Also the pointed end of component lead may hurt your body.

[Page 8](#) (see NOTE 3) will be needed for system operation, maintenance and management. Consult the Toshiba sales representative in your area. (Note 1) Equipment which directly involves human life is as follows: Medical equipment such as life sustaining equipment and equipment in surgical operation rooms.

[Page 9](#) Safety Precautions Non-Liability Clauses I Toshiba will not be responsible for damage caused by a fire, earthquake or a third party, or by use under abnormal conditions such as an accident, intention, error or abuse by the user. I Toshiba will not be responsible for incidental damage due to the use of or inability to use this product, including losses of business profits, suspension of business and mutilation or erasure of stored data.

## [Page 11: Introduction](#)

This manual describes mainly the system functions of the server station SVR-DS for TOSDIC-CIE DS. Read this manual thoroughly to understand the functions of the SVR-DS functions before you use the system. First, read "Safety Precautions" carefully to use this device safely and correctly.

[Page 12](#) Introduction Chapter 6 Time Monitoring This chapter describes time monitoring of SVR-DS. Chapter 7 User Application Environment This chapter describes user application environment of SVR-DS. n Targeted Readers of This Manual This manual is targeted at new users of the OIS-DS/SVR-DS system. You need some knowledge about computer operations to understand this manual, but you don't have to be an expert at computer.

TOSDIC-CIE DS system. The TOSDIC-CIE DS System and SVR-DS For TOSDIC-CIE DS, the maximum of two SVR-DS stations, eight OIS-DS stations, and 22 PCS-DS stations can be connected to one system of Ethernet Control LAN. OIS Engineering Tools, general purpose workstations, and PC's can be connected to the Information System Ethernet.

## [Page 16: Hardware Composition](#)

1. Overview of SVR-DS Hardware Configuration OIS/SVR consists of SVR-DS, which manages databases, and OIS-DS, which is used by operators for screen operations. They are connected via the Ethernet Control LAN. You can connect a printer for messages to SVR-DS, and a printer for reports and hard copies to OIS-DS. SVR-DS Centronics Voice Output Device...

[Page 17](#) 1. Overview of SVR-DS In OIS/SVR, peripheral devices such as printers can be shared by connecting them by using network connections via the Information System Ethernet. ## [Page 21: Tag Management](#)

2. Tag Management 2. TAG MANAGEMENT SVR-DS manages own system tags and internal tags. I I I I System Tags These tags monitor own SVR-DS system. SVR-DS provides OIS-DS with system access support and notifies it of state changes for alarm management. I I I I Internal Tags SVR-DS manages parameters of OIS-DS/SVR-DS and PCS-DS, data regarding OIS-DS/SVR-DS guidance, and process data for applications as "internal tags".

[Page 22](#) 2. Tag Management...

## [Page 23: Database Management](#)

3. Database Management 3. DATABASE MANAGEMENT SVR-DS manages some of the databases managed by OIS-DS/SVR-DS, as described below. OIS-DS Operator Window Current Database Network Database SVR-DS Historical Database Report Database Network Database Figure 3.1 Databases of OIS-DS/SVR-DS (1) Historical Database Saves process data, history information, and report data.

## [Page 24: Historical Database](#)

3. Database Management Historical Database The historical database resides in the hard disk of the SVR-DS. The historical trend data, history messages, report data, and user application data operated by the SVR-DS are collected and saved for each historical tag. The data is read by the OIS-DS. Screen display Historical tag setup Reports...

## [Page 25: Historical Tag](#)

3. Database Management Table 3.1 Specification of Historical Database Item Specification Collectable Data PCS process tags Internal OIS process tags Application set values Collecting Period Fixed Period Trend data :15 period types between 5s and 1 day Collection Report data :1 minute Common trend/report data: 20s to 1 minute Events Event conditions...

## [Page 26: History Message](#)

3. Database Management | | | | History Message The SVR-DS monitors the process and system and saves record message histories including process and system alarms generated, guidance messages, digital tag operations and operator operations. A maximum of 8,000 histories can be saved per system in the hard disk (historical database) of the SVR-DS.

## [Page 27: Report Database](#)

3. Database Management Report Database The "Report" function performs report-calculations of historical tag data saved in the historical database of the SVR-DS and saves calculation results as report tag data in hourly, daily, monthly and yearly units. The saved report tag data can be output by the OIS-DS report printer in the style of daily, monthly or yearly report.

[Page 28](#) 3. Database Management The specification of report data is as follows: Table 3.2  
Specification of Report Data Item Specification Data that can be collected PCS process tags  
Internal OIS process tags Operator set values Collection Period One minute Collection Points  
5,000 tags/system, total with historical tags Save Period Hourly data...

## [Page 29: Report Data Processing](#)

3. Database Management | | | | Report Data Processing One system can be selected and performed from the three systems, namely, the minutely system, hourly maximum system and hourly average system, for hourly, daily, monthly and yearly data of process tags of the PCS-DS and internal process tags of the OIS/SVR. This report calculation processing system is set up in the report database in each system.

[Page 30](#) 3. Database Management 1) Minutely system The month maximum value, month maximum value time, month minimum value, month minimum value time and month average value for one month (31 samples) of day maximum value, day minimum value and day average value of daily data are calculated and the calculation results are saved with report tags as monthly data.

[Page 31](#) 3. Database Management Minutely System Daily Data Monthly Data Yearly Data  
January First Day 12-Month Year 31-Day Maximum Value Maximum Value Maximum Value  
Minimum Value Minimum Value Minimum Value Average Value Average Value Average Value  
Hourly Maximum System Daily Data Monthly Data Yearly Data Hourly Data...

[Page 32](#) 3. Database Management Report Data Processing of Power Factor Indicator Tags  
Maximum, minimum and average values of power factor indicator tags of the PCS-DS process tags are calculated in accordance with the following report calculation methods. When calculating maximum and minimum values, select the set-phase calculation system or absolute-value calculation system.

[Page 33](#) 3. Database Management (1) Hourly data Counter or analog integration is integrated for one hour (60 samples) of historical tag data collected in one-minute periods in accordance with the tag type set up in the report database. Save the integration results with report tags as hourly data. 1) Counter Calculate and total differences between nth data and n-1th data of historical tag data collected in one-minute periods.

[Page 34](#) 3. Database Management Daily Data Monthly Data Yearly Data Hourly Data Minutely Data 00:01 January First Day 12-Month Year 31-Day 23:01 Maximum Value Maximum Value Maximum Value Collected Value 23:02 Minimum Value Minimum Value Minimum Value Collected Value 01 o'clock Average Value Average Value 24-Month...

[Page 35](#) 3. Database Management Closing Time Set up combinations of closing time, closing day and closing month as the closing date and time used in report calculations. Select one of the closing dates and times set up and set them with report tags.

## [Page 36: Network Database](#)

3. Database Management Network Database The network database resides in the hard disks of the SVR-DS and OIS-DS saved with different setup information. In the network database, data can be written and read for each item in the table. The SVR-DS can be accessed from the SVR-DS and OIS-DS. The network database of the SVR-DS is saved with system setup information common to the OIS-DS and SVR-DS, such as historical tag setup information and internal tag

information.

### [Page 37: Background Processing](#)

4. Background Processing 4. BACKGROUND PROCESSING SVR-DS processes data and signals for OIS-DS/SVR-DS in background processing. Alarm Monitoring OIS-DS/SVR-DS monitor process alarms and system alarms. SVR-DS performs signal processing of these alarms. OIS-DS displays these alarms and allows operators to operate them. I I I I Process Alarms Process alarms are managed according to the alarm confirmation methods and alarm grades.

[Page 38](#) 4. ### [Page 42: Event Condition Management](#)

4. Background Processing Event Condition Management SVR-DS manages event conditions used as triggers for guidance, voice output, and history message printing, as well as bit data that indicate occurrence/recovery of events. For event conditions, you need to register status signals and conditions of process tags and bit signals output when the event conditions are met beforehand by using the OIS-SVR Engineering Tools.

### [Page 43: Message Printing](#)

4. Background Processing ' Tag Number ' Atom Name : Bits in Alarm Occurrence State, Tag Representative Alarm Monitor ON/OFF, bits for Alarm Monitor ON/OFF, DI Status of digital tags, and Scan ON/OFF ' NOT Specification ' AND/OR Specification Message Printing When SVR-DS receives record messages of an event occurred, you can specify messages in terms of the message type and print them out from the printer.

### [Page 44: Guidance Management](#)

4. Background Processing Guidance Management SVR-DS manages occurrence and recovery of guidance. You need to register event conditions that serve as occurrence/recovery conditions for guidance beforehand by using the OIS-SVR Engineering Tools. When SVR-DS receives an event change message, it sends a guidance occurrence/recovery message to OIS-DS.

### [Page 45: Internal Process Processing Signals](#)

[Page 47](#) 4. Background Processing In the SVR Station State Display, check that the process execution state during historical mirroring and report data mirroring goes "Suspended".

[Page 48](#) 4. Background Processing...

### [Page 49: Alarm Output](#)

5. Alarm Output 5. ALARM OUTPUT When a process alarm or system alarm occurs, SVR-DS outputs voice messages and external alarms. Voice Messages When a voice alarm is output, the registered voice alarm is output from the voice message device. Voice alarms are output from the voice message device when the events registered for the voice alarms occur or are recovered.

[Page 50](#) 5. Alarm Output 5. Event Conditions : The event conditions for the external alarm output to be generated. 5. Output Type : Selected from the type which outputs from the event occurrence to recovery and the type which outputs only for one second when the event occurs.

### [Page 51: Time Monitoring](#)

SVR-DS monitors the clocks of OIS-DS's, SVR-DS's, and PCS-DS's connected to the Ethernet Control LAN of the TOSDIC-CIE DS system in a certain period (more than one minute). If the allowable time difference (within five seconds) is exceeded, clocks are synchronized to the system clock of own SVR-DS.

[Page 52](#) 6. Time Monitoring...

### [Page 53: User Application Environment](#)

7. User Application Environment 7. USER APPLICATION ENVIRONMENT In SVR-DS, user application programs written in the C language can be executed. The SVR-DS's user application programs are used for background process. The SVR-DS standard functions allow you to use the SVR-DS system-specific functions. Also, you can utilize the OS/FW's (Solaris compliant) rich library of functions.

### [Page 54: Data Sharing](#)

7. User Application Environment (2) Event Condition Programs Detect changes in event conditions and perform processing when they are met. (3) Fixed Cycle/Event Condition Programs Perform processing in a fixed cycle, as well as when event conditions are met. |||| Data Sharing When data is shared among multiple applications, you can use the Network Database to mirror written data to all SVR-DS's.

### [Page 55: Svr Engineering](#)

8. SVR Engineering 8. SVR ENGINEERING The system configuration, internal tags, event conditions, and history message printing information of SVR-DS are registered by using the OIS/SVR Engineering Tools. SVR-DS/OIS-DS and the OIS/SVR Engineering Tools are connected via a Control System LAN or Information System LAN.

[Page 56](#) 8. SVR Engineering...
