6. How to Install the Outdoor Unit

6-1. Removing the Protective Spacer for Transportation

Remove the packing skid from the bottom of unit and then remove the plastic spacer used to secure the compressor during transportation. (Fig. 6-1)

Place the unit on a level concrete pad, block or equal and anchor.

Refer to Section 2. "Selecting the Installation Site".

6-2. Installing the Outdoor Unit

(1)

Install blocks or a solid platform under the outdoor unit which provides a minimum height of 6 in. cm from ground level. (Fig. 6-2)

(2)

The outdoor unit must be bolted down tightly to the blocks or platform with 4 anchor bolts.

6-3. Tubing Direction

Tubing can be extended in 4 different directions as shown in Fig. 6-3.

Service valves are housed inside the unit. To access them, remove the access panel by removing the 3 attaching screws, then slide the panel downward and pull it toward you.

If either rear, right or front tubing is needed, punch out the knockout holes with a hammer or similar tool.

After punching out the knockout holes, mount plastic protectors on the tubing outlets. These accessories are packed inside the unit and can be accessed through the access panel.

Use tube benders to extend refrigerant tubing to the outside.
