2-5. Checking the Drainage

After wiring and piping are completed, use the following procedure to check that the water will drain smoothly. For this, prepare a bucket and wiping cloth ready to catch and wipe up spilled water.

Do not supply power to the unit until the tubing and wiring to the outdoor unit are completed.

WARNING

(1)

Take off the tube cover and through the opening, slowly pour about 1,200 cc of water into the drain pan to check drainage.

(2)

Do Test Run to check the drainage after completing installation. When performing Test Run, be sure to observe the Test Run procedure.

Be careful since the fan will

CAUTION

start turning when checking the drainage.

(3)

After drain checking, return the Operation Selector switch to the RUN position (ON position) and remount the tube cover.

WARNING

To mount the tube cover,

use 4 x x x x 8 tapping screws. Do

CAUTION

not use long screws as they may puncture the drain pan and cause water leakage.
