Placement and mounting

Wall mounting

Note

- Installation must be carried out by qualified personnel. Incorrect assembly can result in severe personal injury and property damage (if you intend to install this product yourself, you must check for installations such as electrical wiring and plumbing that may be buried inside the wall). It is the installer's responsibility to verify that the wall will safely support the total load of the Main Unit and wall brackets.
- Additional tools (not included) are required for the installation.
- Do not overtighten screws.
- Keep this operation manual for future reference.
- Use an electronic stud finder to check the wall type before drilling and mounting.

1. Remove the screws from the Main Unit.
2. Attach the wall brackets to the Main Unit with the screws removed from the Main Unit.
3. Drill 2 parallel holes (Ø 3 - 8 mm each according to wall type) in the wall.
   The distance between the holes should be 640 mm.
4. Firmly fix 1 dowel into each hole in the wall if necessary.
5. Leave a 5 mm gap between the wall and the screw's head.

Lift the Main Unit with the attached wall brackets over the heads of the screws and slot into place.

Power Supply

When using AC power supply

1. Insert the supply plug of the attached power cord fully into AC Power Plug on the back.
2. Insert the power plug into an AC outlet.

Identifying the Parts

Terminal

AC~	AC Power Plug	Connect a power cord.
