Operation

Operation

If the trouble persists even after performing the checks recommended above, shut down the air conditioner's operation, set the

local power switch to OFF, and contact your dealer with the model number and trouble symptoms. You must NOT attempt to make repairs yourself due to the dangers involved. If one or more of the indication lamps is blinking, give this information to the dealer as well.

### Possible Cause

Is the air conditioner in the shutdown mode or was the switch operated after a power failure?

How about the local power switch?

Have any of the fuses blown?

Is the ON timer operation mode established?

If the signal receiver's NORMAL/ALL OFF switch set to "ALL OFF"?

Has the wireless remote control unit's battery run down?

Do the indication lamps show a cooling/heating mode or is the auto cooling/heating mode not available?

Check again.

Contact your dealer.

- Some kind of trouble has occurred in communication between the signal receiver and indoor unit. Alternatively, the wrong address has been set when a wired remote control unit is used.
- Some kind of trouble has occurred in communication between the indoor

unit and outdoor unit.

- The indoor unit's protection device has been activated. Alternatively, the auto flap connector of the ceiling panel has been disconnected.
- The outdoor unit's protection device has been activated.
- Something is wrong with the temperature sensor.
- The outdoor unit's compressor has been protected.
- A trial run mode is underway. Set the trial run mode to Off.

**2 - 14**

*Remote Control Functions*

**Remedy**

Press the wireless remote control unit's ON/OFF operation button again.  
If it was off, set it now to on.  
If a fuse has blown, contact your dealer.  
Clear the timer operation.  
If it is, set it to the "NORMAL" position and cancel the operation.  
If they have, replace them with new ones.  
Change the operation mode.  
Change the setting of the wireless remote control unit's slide switch. (See page 2-9)
