## Inserting PC Cards

PC Cards require Card and Socket Services software, which is preinstalled with Microsoft acts as a translator between the PC Card and the computer that makes hot swapping (switching cards while the computer is on) possible.

*Microsoft*

*Services for your PC Card. Even if your PC Card comes with its own version of Card and Socket Services, you should use the files included in*

*Microsoft*

*support hot swapping. Refer to your PC Card's manual for information.*

An HDD or CD-ROM connected to a 16-bit PC card, might affect the performance of the computer's sound system and data transmission, including slower transmission speeds and dialling errors.

1. If your PC Card does not support hot swapping, save your data and turn off the computer before inserting the PC Card. For more information, see "Hot swapping" later in this chapter.
2. Hold the PC Card with the arrow side up and the connector side toward the slot.
3. Align the card connectors with an available PC Card slot and carefully slide the card into the slot until it locks into place.

There are two eject buttons, one per slot. When the PC card is seated, the eject button for that slot pops out.

4. Press the eject button to put it in its retracted position.

*If you have a Type III card, insert the connector into the lower slot. If you have a Type II card, insert it into either the upper or the lower slot.*

*To avoid damaging the computer or the PC Card, don't force the card into the slot.*
