Charging Batteries

The battery needs to be charged before you can use it to power the computer. You can charge the battery using your computer.

Charging the battery

To charge the battery while it is in your computer, plug the computer into a live AC outlet. It takes approximately 4 hours to charge the battery to full while the computer is off. It takes up to 12 hours or longer to charge the battery to full while the computer is on -how long depends on what other operations the computer is performing.

The battery only can charge a small current while the computer is consuming full power.

The battery may not start charging immediately if:

The battery is extremely hot or cold.

To ensure that the battery charges to its full capacity, wait until it reaches room temperature: 5°C to 35°C. (41°F to 95°F).

The battery is almost completely discharged.

Leave the power connected, and the battery should begin charging after a few minutes.

Once a battery pack is fully charged, we recommend that you operate your computer on battery power until the battery pack discharges completely. Doing this extends battery life and helps ensure accurate monitoring of battery capacity.
