>>

HD Dynamic Contrast feature continually analyzes picture and adjusts contrast in different parts of the picture with the most detailed information. This results in a sharper, deeper image with a more film like image.

>>

PixelPure™ is a suite of 8 different digital video processing circuits that combine to create a consistently clearer, deeper and more accurate picture. PixelPure™ is the key to Toshiba's fixed pixel picture quality; it is the processing that makes the picture.

>>

CableClear™ DNR+ utilizes the Digital 3D to identify the existence and extent of video noise. It then applies the needed appropriate sharpness adjustment to keep the picture clear. This feature will be controlled by input.

>>

High Definition MultiMedia Interface (HDMI™) is the next generation of DVI digital video signal, and multi-channel digital audio signals on a single cable, eliminating the multiple cable hookup.
