Page 42: Getting A Gps Fix Takes Longer Time Than Normal

6.10 Getting a GPS fix takes longer time than normal. • If the previous GPS fix position was more than 500 km or 12 hours apart from your current position and time, it will take significantly longer than the standard TTFF time to get a GPS fix. This is due to the nature of the GPS algorithm and rota- tional velocity between the satellites and planet Earth, and deemed normal.
