Operating Basics

Connecting a LAN cable

The computer must be configured properly before connecting to a LAN. Logging onto a LAN using the computer's default settings could cause a malfunction in LAN operation. Check with your LAN administrator regarding set-up procedures.

If you are using Fast Ethernet LAN (100 megabits per second, 100BASE-TX), be sure to connect with a CAT5 cable. You cannot use a CAT3 cable.

If you are using Ethernet LAN (10 megabits per second, 10BASE-T),

you can connect with either a CAT5 or a CAT3 cable.

If you use Gigabit Ethernet LAN (1000 megabits per second, 1000BASE-T), be sure to connect with either a CAT5e or CAT6 cable.

To connect the LAN cable, follow the steps below.

1. Turn off the power to the computer and to all external devices connected to the computer. 
2. Plug one end of the cable into the LAN jack. Press gently until you hear the latch click into place.
3. Plug the other end of the cable into a LAN hub connector. Check with your LAN administrator before connecting to a hub.

Disconnecting the LAN cable

To disconnect the LAN cable, follow the steps below.

1. Pinch the lever on the connector in the computer's LAN jack and pull out the connector.
2. Disconnect the cable from the LAN hub in the same manner. Check with your LAN administrator before disconnecting from the hub.
