Troubleshooting

•

## Bookmarks

## Power-up modes

---

The computer has three power-up modes:

Hibernation (saves data in memory to the hard disk)

Sleep (power remains on, maintaining the data in memory, but the CPU and all other devices effectively enter a 'sleep' mode)

Boot (does not save data in memory)

Refer also to the section *Turning off the power* in Chapter 3, *Started*.

## Panel power off/on

This feature makes the computer to enter Hibernation when the display panel is closed and turns it back on when the display panel is opened. *If the panel power off function is enabled and you use Shut down Windows, do not close the display until the shut down function is completed.*

## System automatic Sleep/Hibernation

This feature automatically turns off the system in Sleep or Hibernation mode if the computer is not used for a set duration.

Refer to  
of how to set the duration.
