Troubleshooting

•

Bookmarks

7. At the User's Fingers screen, select the finger you wish to enroll from the illustration and then click Next. On this screen please be aware that any previously enrolled FingerPrints would have green check marks, while the FingerPrint you are about to enroll will have a red check mark. If any of the previously enrolled FingerPrints is selected again, the latest information will be enrolled and any previous information over-written.
8. At Advanced Security screen, select whether you wish to enable the security function, and then click Next.
9. At Finalization screen, click Finish - this will complete the FingerPrint registration process.

Window Logon via FingerPrint Authentication

If required, you are also able to use FingerPrint authentication in place of the usual Windows logon process using your username and password. This method is specially useful where there are many users using the same computer as it removes the need for actual user selection when the system is started.

FingerPrint Authentication Procedure

1. Start up the computer.
2. At the Logon Authorization screen, choose any of the enrolled fingers and swipe the FingerPrint on the sensor - If the authentication process is successful, the user will automatically be logged into Windows.

If the FingerPrint authentication process fails you will need to log into Windows using the appropriate username and password. In addition, you should use this manual login process if Finger Print authentication fails for three consecutive tries - a warning message will be displayed when authentication is not normal or is not successful within a fixed duration.

FingerPrint Power-on Security

General

The FingerPrint authentication system can be used to replace the keyboard based password authentication system that is used when the computer is turned on.

If you do not want to use the FingerPrint authentication system for password authentication when the computer is turned on, but instead prefer to use the keyboard entry method instead, simply press the BkSP (backspace) key or the ESC/Rotation button when the FingerPrint Power-on Security screen is displayed. Using this process will switch the password input screen across to the keyboard based entry screen.
