# Names of Parts

Each air conditioner as shown below consists of an indoor unit and an outdoor unit. You can control the air conditioner with the remote control unit.

## **Air**

## **intake**

## **Drain tube**

## **Refrigerant**

## **tubes**

## **Air intake**

## **Remote control unit**

This illustration is based on the external view of a standard model.

Consequently, the shape may differ from that of the air conditioner which you have selected.

The return air in the room is drawn into this section and passes through air filters which remove dust and foreign particles.

Conditioned air is returned to the room through the air outlet (ceiling and wall mounted type) or four air outlets (Recessed type).

The direction of airflow can be adjusted as desired using the remote control unit.

The wireless remote control unit controls power ON/OFF, operation mode selection, temperature, fan speed, timer setting, and air sweeping.

The indoor and outdoor units are connected by copper tubes through which refrigerant gas flows.

Moisture in the room is condensed and drains off by means of this tube.

The outdoor unit contains the compressor, fan motor, heat exchanger coil, and other electrical components.
