[Page 23: Chapter 2 - Featureflex](#)

Configure the Strategy ES system for CTX Proprietary Integration per Chapter 10 of the Strata CIX Voice Programming Manual Volume 2. Step 2: Use eManager to Configure FeatureFlex 1. Log in to eManager. From the Strata CIX/CTX Network panel, click the Default folder to expand the folder, then click CIX_and_SES folder.

[Page 24: Step 3: License Requirement](#)

Step 3: License Requirement 1. A FeatureFlex license for CIX (LIC-CIX-FF) must be purchased. 2. Follow the procedures in MAS Licensing in Chapter 2 - eManager of the Strata CIX Voice Programming Manual Volume 2. Strata CTX Application Implementation Vol 3...

[Page 25: Step 4: Program Strata Cix For Adaptability](#)

FeatureFlex™ Set up FeatureFlex Step 4: Program Strata CIX for Adaptability 1. Using eManager, click Advanced Configuration > System > I/O Device. Program 803 I/O Device screen displays (shown at right). 2. Click IO Logical Device tab and set Program 803 I/O Device.

[Page 26: Access Featureflex](#)

FeatureFlex™ Access FeatureFlex Access FeatureFlex You must be connected to the Media Application Server (MAS) in order to see the Important! FeatureFlex menu option. 1. From the eManager Main screen, click Advanced Configuration > FeatureFlex. 2. Click Configuration and the FeatureFlex Configuration screen displays (shown below). The first time you access this screen it is blank.

[Page 27: Add Featureflex Application To Phone](#)

FeatureFlex™ Add FeatureFlex Application to Phone Add FeatureFlex Application to Phone 1. From the FeatureFlex Configuration screen, click Add. The Add FeatureFlex Application screen displays (shown below). 2. Highlight the Application, Ext., and User Agent you want to assign to a phone. Highlighting an application displays the description at the bottom of the screen.

[Page 28: Edit Featureflex Application](#)

3. Change the field(s) and click OK. 4. If you changed the FeatureFlex feature key assignment, you must set the key assignment for the Strata CIX using eManager. Click Advanced Configuration > Station > Assignments, and set the key assignment.

[Page 29: Remove Featureflex Application](#)

FeatureFlex™ Remove FeatureFlex Application Remove FeatureFlex Application This function removes the feature from the system. To delete a feature from an individual phone, use the Delete feature instead. 1. From the eManager Main menu, click Advanced Configuration > FeatureFlex > Removal. The Remove FeatureFlex screen displays (shown above).

[Page 30: Customizing Feature Applications](#)

FeatureFlex™ Customizing Feature Applications Customizing Feature Applications FeatureFlex comes with preconfigured applications that you and the phone user can customize. The following features are standard. Note You can also customize these features using My Phone Manager. From the FeatureFlex Configuration screen, click Add. The Add FeatureFlex Application screen displays (shown on page 2-5).

[Page 31: Call Monitor](#)

FeatureFlex™ Customizing Feature Applications Call Monitor Note This feature must be enabled/disabled from the end-user's station device. 1. Highlight Call Monitor > Extension > User Agent. Click Add. The Web Page Dialog box for the Call Monitor feature displays (shown below). 2.

[Page 32: Return Call](#)

FeatureFlex™ Customizing Feature Applications Return Call 1. Highlight Return Call > Extension > User Agent. Click Add. The Web Page Dialog box for the Return Call feature displays (shown below). 2. In the left section of the screen, select the Feature Key Name/Application No. from the drop-down menu.

[Page 33: One Number Access](#)

FeatureFlex™ Customizing Feature Applications One Number Access 1. Highlight One Number Access > Extension > User Agent. Click Add. The Web Page Dialog box for the One Number Access feature displays (shown below). 2. Do not edit the User Agent Property/Values. You must edit these properties using the My Phone Manager program.

[Page 34: Screen Call](#)

FeatureFlex™ Customizing Feature Applications Screen Call 1. Highlight Screen Call > Extension > User Agent. Click Add. The Web Page Dialog box for the Screen Call feature displays (shown below). 2. You may edit the fields in this screen or use the My Phone Manager program. See My Phone Manager User Guide for instructions.

[Page 35: Hot Desk](#)

FeatureFlex™ Customizing Feature Applications Hot Desk To setup a Hot Desk environment, you must apply this FeatureFlex application to a pool of DKT stations that can be used by users. These stations do not have actual phones associated with them. You can also create voice mail boxes for each Hot Desk station. In order to swap extensions a valid equipment number that will never be used for a real extension is required.

[Page 36](#) FeatureFlex™ Customizing Feature Applications Create Hot Desk Stations Hot Desk stations do not need to be associated with any hardware. 1. Using eManager, click Advanced Configuration > System > Card Assignment. Assign the Equipment Numbers (cards to slots). Note No physical hardware is used for Hot Desk stations, however,...

[Page 37](#) FeatureFlex™ Customizing Feature Applications 7. Leave ToshibaHotDeskExtension field blank. This field is used by the system to swap and store the Hot desk telephone's extension. 8. Click Assign to save your edits. To create a One Touch button for Hot Desk Assignment on the phone, use Station > Assignments, Key tab.

[Page 38: Simultaneous Ring](#)

If neither phone answers the call, the call is forwarded to voice mail. The alternate destination can be configured through eManager or My Phone Manager. Strata CIX PSTN User cell...

[Page 39](#) FeatureFlex™ Customizing Feature Applications To set up Simultaneous Ring Make sure Tone First is selected, see steps below. 1. Using eManager, click Advanced Configuration > Station > Assignments. 2. Click the DKT tab. Select the extension. 3. Select Tone first in 05 Tone Ring/Voice Announce parameter.

[Page 40](#) FeatureFlex™ Customizing Feature Applications Table 2-1 Field Definitions Field Description Secondary Destination The other phone will ring simultaneously when the desktop rings. Number If this box is checked, user must enter Mailbox password before line gets connected. Check Security Code If this box is checked Simultaneous Ring is enabled.

[Page 41: Featureflex Application Interactions](#)

FeatureFlex™ FeatureFlex Application Interactions FeatureFlex Application Interactions The following table shows how the FeatureFlex Applications interact with other FeatureFlex Applications and some CIX features. Simultaneous Alarm Call Screen Call Call Return Number Hot Desk Ring Clock Monitor Access (See Note 7) Alarm Clock Screen Call See Note 1...

[Page 42](#) This page is intentionally left blank.

[Page 43: Chapter 3 - Info Manager](#)

CIX. You can both configure and view them using the telephone's LCD or a network PC. See the Strata CIX DKT/IPT Telephone User Guide for instructions on using this program with the phone.

[Page 44: Step 1B: Install Info Manager Software](#)

Info Manager™ PC Software Requirements Step 1B: Install Info Manager Software 1. From the Installation Menu, select Install Info Manager Application option. 2. Follow the instructions on the install screens. When the installation reaches 100%, the installer runs a Info Manager setup application. Do not close or exit the installation wizard at this time. It will close automatically upon completion of the Info Manager setup.

[Page 45: Step 2: Create/Edit Databases](#)

Info Manager™ PC Software Requirements 6. The screen displays the Tomcat installation directory (shown right). Click next. 7. When the installation is complete, the install program runs the Info Manager application and displays the database screen (see Figure 3-2). You can choose to program the settings and parameters at this time (follow Step 2) or select Exit to complete the Installation Wizard.

[Page 46: Add/Edit Company](#)

Info Manager™ PC Software Requirements Add/Edit Company 1. From the Directory Tab Screen (see Figure 3-1 on page 3), click Add in the Company section of the screen. The Company screen displays (shown right). 2. Type the company information into the fields and click OK to

save the information and exit the screen.

[Page 47: Configure Calendar Properties](#)

Info Manager™ PC Software Requirements Configure Calendar Properties To configure the Calendar Properties if you chose to skip the configuration during the installation: 1. Run the InfoManagerApp_Config utility from the Start >All Program menu. 2. Click on the Parameters tab and you should see the following. 3.

[Page 48: Stock Quote](#)

Info Manager™ Stock Quote Stock Quote The Stock Quote application allows you to view selected stock prices. You can add as many stocks as you want. Weather The Weather application allows you to get a weather report from selected weather stations (sample shown at right).

[Page 49: Calendar](#)

Info Manager™ Calendar Calendar The Calendar application allows you to view your Outlook Calendar appointments. Note Changes to the entries on the calendar must be made in Microsoft® Outlook. The Calendar function on the Info Manager works using Outlook Web Access.

[Page 50: Configure Settings](#)

Info Manager™ Configure Settings Configure Settings From the main menu on the left, click configure. The Configure screen displays (shown right). Properties 1. Click edit under Properties. The Properties screen displays (shown right). 2. Fill in the fields and click Submit. Stock Quote Add Stock to Display 1.

[Page 51](#) Info Manager™ Configure Settings 2. Click Add under Stock Quote. Type in the stock symbol (can be 2, 3, or 4 letters). Note If the symbol you enter is not valid, the display will show it with 000 in the price column.

[Page 52: Configure Company News](#)

Info Manager™ Configure Settings Configure Company News Add Company News Story to Display 1. From the main menu on the left, click Configure. The Configure screen displays. 2. Click Add under Company News. Set the date (current date displays automatically) using the drop-down menus.

[Page 53: Chapter 4 - Uniform Call Distribution](#)

Uniform Call Distribution Uniform Call Distribution (UCD) provides ACD-like service based on the simplified Distributed Hunt feature. Incoming calls are answered by Voice Mail as the Auto Attendant function or they can be directly routed to the UCD (Distributed Hunt) Pilot number. The caller will dial the UCD Pilot station in response to a prompt.

[Page 54: Login/Logout](#)

If no agents are available (e.g., all agents are in the busy state), a call is queued to the UCD pilot. It will be delivered to the agent when the agent becomes available. While it is queued, the caller hears MOH which is assigned to the UCD pilot (see Program 209 in the Strata CIX Programming Manual Vol. 1).

[Page 55: Ucd Group Setup](#)

Uniform Call Distribution UCD Group Setup Note Ring-No-Answer overflow for each agent can be established by setting Call Forward-No- Answer (CFNA) on the UCD DN button. The agent's UCD button will ring for the time set in the CFNA timer, then hunt to the next available agent. The CFNA destination must be set to the next agent in the UCD group rotation.

[Page 56](#) Uniform Call Distribution Programming Note If station Call Forward No-Answer is not registered on the agent station (PDN or PhDN), a call to an agent station will continue to ring until answered or the caller hangs up. Set SCF assignments (Prog 500/504) From eManager, click Advanced Configuration >...

[Page 57: Capacity](#)

Uniform Call Distribution Capacity Capacity • Total waiting calls in the system – The number of calls waiting in the queue times the number of agents in the system must be less than 128. For example, there are two UCD groups and group #1 has 10 agents and group #2 has 15 agents.

[Page 58: Interaction With Other Features](#)

Uniform Call Distribution Interaction with Other Features Interaction with Other Features Call Forward, System Call Forward UCD calls do not forward per the station's call forward assignments. Calls routed directly to the agent's station, not through the UCD pilot, will forward when Call Forward or System Call Forward is set.

[Page 59: Intercept](#)

Uniform Call Distribution Interaction with Other Features Intercept If UCD is assigned as the intercept position, the call terminates to UCD agent according to the hunting rule even if the agent is not logged in. Phantom DN If the phantom DN is assigned to the UCD group, Login/Logout and DND are controlled by the owner of the phantom DN.

[Page 60](#) This page is intentionally left blank.

[Page 61: Chapter 5 - Emonitor/Alarm Notification](#)

ISDN, T1, and System Resources. This section provides a description of Alarm types the Strata CIX system sends to eMonitor and describes how eManager R5.0 or later is used to set up the CIX system to send alarm notifications to the eMonitor application.

[Page 62](#) Notification Alarm Notification Indicator (Button) Recommended Configuration Install eMonitor and the Strata CIX system on the same LAN. Strata CIX CIX Processor Network Jack BDKU eMonitor SNMP Trap Data Alarm Buffer SMTP Server Configuration with NAT Strata CIX Public IP Address...

[Page 63: Alarm Notification Setup And Programming](#)

Set to Disable to shut off alarm notification output. When this feature is enabled the Strata CIX system will send the contents of the alarm buffer to the eMonitor servers as an Alarm Summary every 10 minutes. The Alarm Summary is a list of alarms stored in the Strata CIX alarm buffer.

[Page 64: Strata Cix Network Emonitor](#)

CAUTION! function before installing a new version eMonitor. It is recommended you go through the Toshiba eMonitor training module prior to installing and using eMonitor V1.08. To access the training module, perform the following steps: 1. Log into Toshiba University, Technical College.

[Page 65: Prior To Installation](#)

Notification Strata CIX Network eMonitor Important! Microsoft .NET Service Pack 1 (SP1) must be installed before running eMonitor. • IE Browser V6.0 -This component version is a required by CIX Network eMonitor. • If this version is not loaded the CIX Network eMonitor installer detects this missing component version and prompts for installation.

[Page 66: Step 4: Install Cix Network Emonitor On Pc](#)

Remove Software function before installing eMonitor. All firewalls and anti-virus programs must be stopped. eMonitor can be installed from a CD-ROM or as a download from the Toshiba FYI web site. Download eMonitor Software The basic steps for downloading then, installing eManager from are listed below: 1.

[Page 67](#) Notification Strata CIX Network eMonitor 3. Open the folder the files were uncompressed into. Double click the Autorun file. 4. The installation program checks the supporting OS: • The installer terminates the installation process if the target machine OS is not supported.

[Page 68](#) Notification Strata CIX Network eMonitor If all of the required software is detected, the system will perform some data setup then start the Installation Wizard. 5. The Install Wizard dialog box will open. Click on <Next>. 6. When prompted select install for Everybody then click on <Next>.

[Page 69: Step 5: Log In As Administrator](#)

Notification Strata CIX Network eMonitor Step 5: Log In as Administrator 1. Start the Internet Explorer. 2. Type <http://localhost/cixalarmmonitor> and press <Enter>. The Login screen displays (shown right). 3. In the User Name field, type in Administrator. 4. In the Password field, type in the word password.

[Page 70](#) Notification Strata CIX Network eMonitor 1. Select a Telephone System from the CIX equipment list displayed on the screen. If the desired equipment name is not found, type in a name in the CIX Name field and click Add.

[Page 71](#) Notification Strata CIX Network eMonitor Buttons • Add – Create CIX Equipment and store in Profile Database. • Modify – Modify CIX Equipment from Profile Database. • Delete – Remove CIX Equipment from Profile Database. • Test Connection – Get connection results by using IP Address and Community Name.

[Page 72: Step 8: Set Up Vbalarm Notification](#)

Notification Strata CIX Network eMonitor Step 8: Set up vbAlarm Notification Alarm Notification Setup Screen This screen sends commands to add/remove alarm traps and enables/disables alarm notification. Note If the CIX is behind a NAT router and eMonitor is not on the same LAN as CIX, eMonitor cannot administer CIX Alarm programs.

[Page 73: Step 9: Monitor Alarms](#)

Notification Strata CIX Network eMonitor Step 9: Monitor Alarms Alarm Monitor Screen This screen displays an alarm list based on the equipment in the Profile Database. Note The same alarm only counts once., Table 5 Alarm Monitor Screen Fields...

[Page 74](#) Notification Strata CIX Network eMonitor If you double-click on a listing for a Command/Monitor mode CIX, a pop-up window displays (shown below) with detail cabinet and slot error information. Administer's CIX Program 920. If you click in the Major, Minor or Warning...

[Page 75: Step 10: View And Maintain Alarms](#)

Notification Strata CIX Network eMonitor Step 10: View and Maintain Alarms Alarm Viewer (Browser and Maintenance) Screen Using this screen you can: • Save the current event log as a backup file using the Save button. • Export the current event log file as a tab delimiter text file using the Export button.

[Page 76: Step 11: Email Notification](#)

Notification Strata CIX Network eMonitor Step 11: Email Notification Email Notification Description The email notification feature allows eMonitor to automatically send email alarm notifications to designated mail boxes. The email notifications can be sent to multiple mail boxes and can be sent, or not sent, depending on the CIX Alarm type.

[Page 77](#) Strata CIX Network eMonitor Summary Monitoring The Strata CIX system has a buffer that stores alarms as they are generated. The contents of the alarm buffer can be automatically sent to the eMonitor as a Summary report, at 10 minute intervals, by enabling the Alarm Buffer Status parameter in the CIX.

[Page 78](#) Notification Strata CIX Network eMonitor Email Configuration Use the email configuration screen to perform the following: • View existing configured email addresses. • Add a new email address, • For each email address the user can select: – ALL or –...

[Page 79](#) 5-21. Note Only Strata CIX systems setup in the eMonitor Profile will display on this screen. Systems can only be added from the "eMonitor Profile," not from this screen. Modify: Used to modify an existing item, select an email address from the list and click modify.

[Page 80](#) Notification Strata CIX Network eMonitor Test: Initiates the email test mode; in this mode the first alarm received from the CIX system will be forwarded to the destination email address. When an alarm is forwarded the email test is reset.

[Page 81](#) When the user clicks on either the Add or Modify buttons the following screen appears. The CIX Name and the IP address of the Strata CIX systems setup in the eMonitor

profile will be present on one screen. Click to highlight a CIX system then, click to check-mark the type of alarms that will cause notification email to be sent.

[Page 82](#) Notification Strata CIX Network eMonitor The verify button is used to verify that the SMTP email server is valid and reachable, it does not guarantee that the email account is valid or can receive messages. If the address can be reached a test email is sent to that address for the user to check.

[Page 83: Chapter 6 - Traffic Measurement And Reporting](#)

Traffic Measurement and Reporting The Traffic Measurement (TM) feature provides a method of recording the traffic in a Strata CIX system and a method of reporting the system traffic statistics to a system administrator. System traffic statistics are mandatory for the system administrator to both monitor the effectiveness of the system and determine whether the system is over dimensioned, under dimensioned, or has improper traffic balance.

[Page 84: Tm Output Statistics](#)

Traffic Measurement and Reporting TM Output Statistics TM Output Statistics The TM information collected is sent from the report buffer each hour. It is compiled into the output format, then output to specified output port, and the SD/SM card if installed. Reports are sent to the I/O or LAN port and the SD/SM card at the same time.

[Page 85: Measurement Categories And Items](#)

Traffic Measurement and Reporting Measurement Categories and Items Measurement Categories and Items In each report the requested categories will be measured, The report will show all of the following items in each category. Category Items Description OLG (Analog CO) Station to Trunk Calls Number of calls by stations to OLG trunks attempted Counts each attempt to access a trunk in the OLG.

[Page 86](#) Traffic Measurement and Reporting Measurement Categories and Items Category Items Description (continued) ILG (ISDN CO) Incoming Calls Same as ILG (CO) DID No. nnnn Same as ILG (CO) Call CCS Refer to the Traffic Intensity Calculation Abandoned Calls Same as ILG (CO) ILG (Strata Net) Incoming calls Same as ILG (CO)

[Page 87: Traffic Measurement Reports](#)

Traffic Measurement and Reporting Traffic Measurement Reports Traffic Measurement Reports When Traffic Measurement is setup the system will output a report, example shown below, for each hour of the requested measurement period. The example shown below is a printout of the 08011300.trf file.

[Page 88](#) Traffic Measurement and Reporting Traffic Measurement Reports Measurement Period 1300 1400 Incoming Line Group 2002 Group Size Incoming Calls Call CCS 67.8 Abandoned Calls Measurement Period 1300 1400 Incoming Line Group 2003 Group Size Incoming Calls Call CCS Abandoned Calls Measurement Period 1300 1400...

[Page 89: Traffic Intensity Calculation](#)

Traffic Measurement and Reporting Traffic Intensity Calculation Traffic Intensity Calculation Analog Trunk Traffic Intensity is calculated based on how long each trunk is in use during the measurement hour. The time a trunk circuit is in use is called hold time. Holding time is measured per trunk. Holding time T_hold (seconds) is calculated as below;...

[Page 90: Isdn Trunk Traffic Intensity](#)

Traffic Measurement and Reporting Traffic Intensity Calculation For example, if three calls seize trunks 1, 2, and 3 belonging to OLG1 during a measured hour (refer Figure 6-1) traffic intensity A [CCS] carried by the OLG1 is calculated as below; \sum ...

[Page 91: Hourly Traffic Reports \(Program 921\)](#)

Traffic Measurement and Reporting Hourly Traffic Reports (Program 921) Hourly Traffic Reports (Program 921) TM, when ON, sends data each hour. The data is stored in the SD/SM card on the processor in a TRAFFIC folder or it can be sent to an external device via LAN or RS-232. Each file is named: MMDDHHNN.trf.
