TOSHIBA

Product Summary

The Strata CIX1200 VoIP business communications system is here! Delivering big-company features

at an affordable price for enterprises and branch locations. Bringing Toshiba quality, reliability and affordability to medium-to-large companies. Supporting up to 1,152 ports, the Strata CIX1200 system

is designed for 200 to 1,000 users and delivers networked applications for as many as 128 sites.

Positioning

As its largest member, the Strata CIX1200 joins the Strata CIX family, now consisting of the CIX40,

CIX100, CIX200, CIX670 and CIX1200. The Strata CIX1200 expands Toshiba's reach in the medium-to-large market segment, giving enterprises a robust Toshiba solution at nearly double the port capacity of our Strata CIX670. As with the entire Strata CIX family, the Strata CIX1200 gives users Toshiba's legendary quality and reliability in an affordable VoIP system that can be networked with up to 128 sites. The CIX1200 can be customized using Toshiba's FeatureFlex® adaptability tool, and provides a smooth migration path from smaller Toshiba systems. The Strata CIX1200 does not replace the CIX670, it expands the Strata CIX product line. The CIX1200 Basic and Expanded A configurations are the same port capacity as the CIX670 but offer expanded feature capability. The CIX1200 provides the same feature rich functionality as existing Strata CIX systems.

Value Propositions

Strata CIX1200 is the only system of its size to allow the user to adapt capabilities to their specific needs. Using FeatureFlex, Toshiba's feature adaptability and customization tool, the system can be tailored well beyond its standard system features, administrative options and programmable features.

It allows enterprises to create user-definable features company wide, by department, or for individual

users. Existing features can be modified, and new ones can be created, including features in CIX call processing, as well as blended features that work between all system applications and resources.

The Strata CIX1200 system can be networked with other Toshiba Strata CIX systems, from other CIX1200 systems all the way down to the small 40-port Strata CIX40 system. It can be networked for up to a total of 128 sites to accommodate larger capacity or distributed configurations.

The networking capabilities of the Strata CIX1200 system make it a perfect solution for a headquarters site that is networked to small or remote offices or retail/restaurant locations.

Summary of Contents for Toshiba Strata CIX1200

[Page 1](#) Strata CIX systems. Value Propositions Strata CIX1200 is the only system of its size to allow the user to adapt capabilities to their specific needs. Using FeatureFlex, Toshiba's feature adaptability and customization tool, the system can be tailored well beyond its standard system features, administrative options and programmable features.

[Page 2: Features And Capabilities](#)

Ability to Mix and Match IP and Digital on a Single System — Unlike many competitive IP systems, Strata CIX1200 can be TDM-enabled, giving users a choice of running a pure IP system or a mix of IP and digital TDM. This allows users to choose how they will maximize their systems and migrate existing equipment.

[Page 3](#) Pricing and Availability Pricing and Availability Strata CIX1200 system pricing is now in the online price book and CIX Quote version 5.2D01. The Strata CIX1200 is scheduled to begin shipping on August 5, 2008. CIX1200 Bundles Package pricing is available to make Strata CIX1200 system pricing more cost-effective. The packages are shown in the table below.

[Page 4](#) V2 or later. Using earlier versions may cause intermittent problems on IP telephones interfaced to those cards. Do not install BIPU cards in cabinets connected to the base cabinet with fiber optic cables. Training Sales and Technical training is available on-line. Announcing Strata CIX1200 Expanded Capacity 4 of 37...

[Page 5](#) Easy Migration to Strata CIX1200 from Other Toshiba Strata CIX Systems makes growth and expansion very cost-effective and protects your investment. Toshiba has retained its renowned migration path with the Strata CIX1200. Users of other Toshiba Strata business communication systems can easily migrate their systems to the new Strata CIX1200.

[Page 6](#) In addition to storing the system database and program file, the SD memory card can also store system log files. The Strata CIX1200 system is compatible with Toshiba brand 512 MB, 1 GB, 2 GB, and 4 GB-SDHC memory cards. The system limits the amount of memory available for log files. The 1 GB and larger memory cards can store approximately 13 times (or more) the number of log files as the 512 MB SD card.

[Page 7: Processor Cards](#)

CIX1200 Configurations Processor Cards The Strata CIX1200 processors come in three configurations. • HCTU1A - for the CIX1200 Basic, up to 192 ports, is a single card installed in base cabinet slot B102. • HEXAU1A - for the CIX1200 Expanded A, up to 672 ports, an HCTU1 with a HEXAU1 daughter board installed in slot B102 and connected to an EEXAS1 card in slot B101.
