Optimizing video images

After the video device is connected properly and the image is on the screen, you can optimize the image using the onscreen menus. For general information on using the menus, see page 21.

Optimizing video images

Change the Aspect ratio. Aspect ratio is the ratio of the image width to image height. TV screens are usually 1.33:1, also known as 4:3. HDTV and most DVDs are 1.78:1, or 16:9. Choose the option that best fits your input source in the menus, or press the **Resize** button on the remote to cycle through the options. See page 22.

Adjust the Keystone, Contrast, Brightness, Color, or Tint in the Picture menu. See page 22.

Select a different Color Temperature or use the Color Control to adjust the gain and offset of the red, green, and blue color. See page 26.

Select a specific Color Space or Gamma. See page 26.
Select a different Video Standard. Auto tries to determine the standard of the incoming video. Select a different standard if necessary. See page 26.

Turn overscan on to remove noise around the video image. See page 27.

Fine tune component inputs using the TrueLife™ adjustments. See page 25.

Choose High Power to maximize the light output. See page 28.

Make sure your DVD player is set for a 16:9 television. See your DVD player's manual for instructions.

Customizing the projector

You can customize the projector for your application. See page 28 to page 30 for details on these features.

- For rear projection, turn Rear mode on in the **Settings>System** menu.
- For ceiling mounted projection, turn Ceiling mode on in the **Settings>System** menu.
- Turn the projector's display message on or off in the **Settings>System** menu.
- Turn on power saving features.
- Specify blank screen colors and screen brightness in the **Settings>System** menu.
- Specify the menu language.
