I Simplified Remote Controller Installation Guidelines

Place of installation

- Mount the simplified remote controller at a height of 1 to 1.5 meters above the floor where it can sense the average temperature of the room.
- Do not mount the simplified remote controller in a place exposed to direct sunlight or a place exposed to outside air such as near a window.
- Do not mount the simplified remote controller behind an object so that it is separated from the air circulation of the room.
- Mount the simplified remote controller within the room being air conditioned.
- The simplified remote controller must be mounted on the wall or other surface vertically.

SWITCHING THE ROOM TEMPERATURE SENSOR

The room temperature sensor is placed both in the indoor unit and the simplified remote controller respectively. Either sensor can be used to sense the room temperature.

The indoor unit sensor is usually used.

If you use the simplified remote controller to sense the room temperature, switch the remote controller sensor switch (RCU. SNS) on the P.C.B. of the simplified remote controller from OFF to ON. See the diagram below.

< NOTE 1 > Even though the simplified sub-remote controller switch is switched from OFF to ON, the sub-remote controller cannot detect the room temperature.

< NOTE 2 > The standard remote controller cannot detect the room temperature.

How to Install the Simplified Remote Controller

< NOTE 1 > Do not twist the simplified remote controller wiring with the power wiring or run it in the same metal conduit, because this may cause malfunction.

< NOTE 2 > Install the simplified remote controller away from sources of electrical noise.

< NOTE 3 > Install a noise filter or take other appropriate action if electrical noise affects the power supply
